Keep in mind, checking out testimonials can help you make notified decisions concerning what to check out next and can subject you to new authors and genres you might not have actually taken into consideration previously.

## **REVIEW OF SIDEWALK MITCHELL DUNEIER**

- A decent book with some interesting ideas, but little to do with anything "Chi," which was a little disappointing. The underlying emphasis throughout this book is on competition, even though

usually unstated. It's all about technique. He advocates using as little leg muscle as possible. Specifically, one does not push off using the toes or propel the body using the leg muscles like a sprinter might do. Instead, the only muscle action of the legs is to pick themselves up. He uses a good illustration: stand straight and fall forward. Instinctively, one of your legs will swing forward to catch you. If you use ONLY this muscle action, you'll have the basis of this book's technique. In addition, he advises you engage your core muscles and maintain an erect, proper posture. (That's good advice because it keeps your body from getting sloppy.) His advice for deep, rhythmic breathing and for relaxing the body overall are sound. The arms swing

loosely and to the rear which opens up the chest for better breathing. It is important to focus on what our body and our breath are doing as we run (and not be distracted by our normal day-to-day thoughts). This makes running almost like meditating, which in my opinion is a good thing. I'm trying this technique in my regular runs and so far it seems "interesting," but no final verdict yet. Some advice sounds a little dubious. For example, he advises pronators (whose feet strike the ground not parallel to their path) to force their feet parallel to avoid injury. I'm certainly no expert, but seems to me that forcing a natural pronation to an unnatural angle might itself lead to injury. In any case, I'd certainly want to see some clinical studies before adopting this advice. Now

for a few disappointments. I've run mostly for pleasure for almost 40 years, and while the book's premise sounds appealing, there are some seeming contradictions. It opens with an image of children running in a schoolyard with a description about how we should all seek to run naturally, free, and unfettered, for the sheer joy of running, just like those kids. It then proceeds through 200+ pages to lay out dozens upon dozens (seemingly) of detailed rules about how we should run, including how we should hold our thumbs. It advises we carry a metronome so that we run exactly X paces per second. Well, I doubt those kids studied any such list or carry pacers. Something just does not add up here. Implicit in this book is that we let our body tell us the style in

which we run as well as how far and fast, but there's almost no follow through on this theme. Instead he presents a detailed, one-size-fits-all running style that (at least in my opinion) is not necessarily what our bodies might tell us to do. There's no room for different body types or running styles. This style may indeed benefit some runners who have certain physical situations. If you are one of those then his techniques are certainly worth a try. Hope they help. But I'm not convinced this style is for everyone. There's supposed to be a deep connection with Ti Chi, but apart from a few oblique references to the Chi energy, there is precious little actual discussion of this topic. And there's this Chi energy itself. I personally don't believe in it (although I would not

disparage those who do). In any case, it has really nothing to do with what's taught in the book. Although this is certainly not the author's fault, this is one of those cases where the advice might best be presented in "20 pages or less." But 20-page books don't sell for enough money to make any profit. And so they are padded with redundant and generally useless information. Again, not his problem, but this makes the book a bit tedious to read. In summary, the specific technique he advocates is worth a try. Much of the advice is fine: that we run for the sheer joy and fun of it, that we constantly listen to our bodies and let them guide us to a relaxed and stress-free running style, that we engage our core muscles and maintain a nice posture, that we

breath deeply and rhythmically, and that we relax everything we can. But in the end this is mostly a running-style book -- not having much to do with anything mystical, like Chi.

- I was lucky enough to discover ChiRunning in 2004, shortly after the first edition of the book was published. Learning to run with more efficient form ended 25 years of knee pain for me known as Iliotibial Band Syndrome (ITB). With ChiRunning, I learned to engage my core properly which reduced the side-to-side motion of my hips. This in turn relieved the extra stress on my ITB and eliminated the rubbing on the outer part of my knee. In the new edition of

ChiRunning, Danny Dreyer has added an in depth section on running injuries called "Troubleshooting: Injury Prevention and Recovery." All common running injuries and their related form issues are addressed including ITB syndrome, shin splints, achilles tendonitis, plantar fasciitis, groin pulls, hamstring pain, calf pulls and soreness, and other knee, ankle and foot pain. Chapter four on the "Basic Components of Technique" and Chapter five on "How to Learn ChiRunning" are also greatly expanded in the new edition. Step by step lessons and additional pictures clearly explain and illustrate the ChiRunning technique.
