## COGNITIVE PROCESSING

- unfortunately if you are this interested in this book, you are the choir. and its sermon is long and reads like a broken record. we get that you stole a clever title "affluenza" and made it into a book. every other word is some sort of reference back to that idea. it is like ADD in book format. clever titles aside, this book is full of unsupported facts that wreak of seemingly skewed information and is full of ideas you already believe in (malls suck, american personal debt is out of control thanks to credit cards, and SUVs are inefficient). this book reads like an extended college paper - a long long list of vague facts

that all center around the idea that we're focused too much on money and products, but never present a clear message. i swear this book is written on a 6th grade reading level - with simple soundbyte facts, a repetitive overall analogy to the point where i feel dumbed down every time i see the thermometer at each new chapter, and a general lack of depth further than any cursory internet search would yield. they say the book is always better than the movie. well this book proves that a book based on a TV show is exponentially worse.

- "Secrets of a Freelance Writer: How to Make \$100,000 a Year or More" is packed with practical advice on making a

decent living as a writer. It doesn't dwell on becoming rich by writing the next great American novel, but gives advice on where to get good-paying writing jobs to pay the bills while you're working on your novel or non-fiction masterpiece. I didn't know there were so many opportunities for making money writing out there in the real world until I read this book. I highly recommend this book to any struggling writer (aren't we all!). It is realistic and practical, full of great suggestions.
