This book examines mathematical discourse from the perspective of Michael Halliday's social semiotic theory. In this approach, mathematics is conceptualized as a multisemiotic

discourse involving language, visual images and symbolism. The book discusses the evolution of the semiotics of mathematical discourse, and then, proceeds to examine the grammar of mathematical symbolism, the grammar of mathematical visual images, intersemiosis between language, visual images and symbolism and the subsequent ways in which mathematics orders reality. The focus of this investigation is written mathematical texts. The aims of the book are to understand the semantic realm of mathematics and to appreciate the metaphorical expansions and simultaneous limitations of meaning in mathematical discourse. The book is intended for linguists, semioticians, social scientists and those interested in

mathematics and science education. In addition, the close study of the multisemiotic mature of mathematics has implications for other studies adopting a social semiotic approach to multimodality.

This book opens with an axiomatic description of Euclidean and non-Euclidean geometries. Euclidean geometry is the starting point to understand all other geometries and it is the cornerstone for our basic intuition of vector spaces. The generalization to non-Euclidean geometry is the following step to develop the language of Special and General Relativity. These theories are discussed starting from a full geometric point of view. Differential geometry is presented in the simplest way and it is applied to describe the physical world. The final result of this

construction is deriving the Einstein field equations for gravitation and spacetime dynamics. Possible solutions, and their physical implications are also discussed: the Schwarzschild metric, the relativistic trajectory of planets, the deflection of light, the black holes, the cosmological solutions like de Sitter, Friedmann-Lemaître-Robertson-Walker, and Gödel ones. Some current problems like dark energy are also sketched. The book is self-contained and includes details of all proofs. It provides solutions or tips to solve problems and exercises. It is designed for undergraduate students and for all readers who want a first geometric approach to Special and General Relativity.

This book highlights some of Kenneth King's diverse contributions to international and comparative education, African studies and development studies over more than four decades. From his pioneering work on the first educational commissions to Africa, through his research on skills training in the informal sector, and on to his critical analysis of education analysis in development agencies, this book makes influential materials available in one place. Appropriately, it illustrates his career-long connections with Kenya, but

also his more recent engagement with Japan, China and India. It is the first CERC volume to pay significant attention to the policies and politics of skills development. Kenneth King is an Emeritus Professor of the University of Edinburgh. He was based in and directed its Centre of African Studies for many years, and lectured on international perspectives in education and training in its School of Education. His research interests have addressed the politics and planning of skills development, including in the informal sector of the economy, aid policies towards education of both Western and Asian donors, and higher education cooperation. He founded NORRAG, the network for international policies and cooperation in education and training, in 1986, and edited

NORRAG News until 2016. He was President of the British Association for International and Comparative Education (BAICE) from 2014-2016, and was one of the founding members of the UK Forum on International Education and Training (UKFIET).

## **REVIEW OF GENERAL MATHEMATICS FOR JSS 2**

- A remarkable achievement. The depth of learning and research displayed in this book is extremely impressive. I read this book with a very skeptical eye, looking for ideological biases. There were NONE. This is a straightforward, honest, in-depth

description of the actual state of the world today. I cannot recommend this book too highly. The book is immensely cheering, a testament to the human spirit. And, if his policy recommendations are carried out, the world will be a much better place in the future. Perhaps even more important is his exposing the intellectual dishonesty (ie, their complete willingness to lie in pursuit of their own private agenda) of the professional doom-prophets/"environmentalists". This is the best thing that could have happened to the environmental movement, at least for those of us who really do care about the environment. Bravo, Mr Lomborg!

- How should an open-minded person with a strong interest in determining the truth and with no political axe to grind

treat this book? In my view, it is a good starting point, but ONLY that, for exploring many important issues regarding the environment. Check out the sources, the claims and counterclaims. Keep in mind that the 'truth' in this vastly complex subject area can rarely, if ever, be completely determined and no 'side' has a monopoly on it. SKEPTICISM indeed should be the rule, both for the claims made in the book and for claims made by the book's opponents...What really matters is not whether the 'doomsayers' of thirty years ago were right or not (How many predictions of ANY kind made thirty years ago turned out to be right?), but what will conditions on our planet be like for our descendants and how cautious should we be right now to increase the

odds that those conditions will be good. In the end, as a result of reading this book or reading about this book, you will probably use it simply to confirm your pre-existing opinions. Too bad.
