Social Institutions and Economic Development North Quincy, Mass. : Christopher Publishing House

Focusing on current economic problems, Kerala's Economic Development:

Emerging Issues and Challenges provides an in-depth analysis of the major development issues and challenges faced by the state. Kerala's development experience has attracted worldwide attention due to its paradoxical development: attaining higher quality of life of people on the one hand and continuation of the backward productive sectors on the other. The state's

economy remained backward in many respects and relied heavily on the remittance of Keralite emigrants. The implementation of liberalisation and globalisation policies since 1991 radically altered the growth process and Kerala achieved higher rates of investment and growth and greater technological change. These policies, however, have not only provided enormous opportunities, but also new challenges. This book examines the state's economic growth as well as the issues that have accompanied the policy changes.

In Failure by Design, the Economic Policy

Institute's Josh Bivens takes a step back from the acclaimed State of Working America series, building on its wealth of data to relate a compelling narrative of the U.S. economy's struggle to emerge from the Great Recession of 2008. Bivens explains the causes and impact on working Americans of the most catastrophic economic policy failure since the 1920s. As outlined clearly here, economic growth since the late 1970s has been slow and inequitably distributed, largely as a result of poor policy choices. These choices only got worse in the 2000s, leading to an anemic economic expansion. What growth we did see in the economy was fueled by staggering increases in

private-sector debt and a housing bubble that artificially inflated wealth by trillions of dollars. As had been predicted, the bursting of the housing bubble had disastrous consequences for the broader economy, spurring a financial crisis and a rise in joblessness that dwarfed those resulting from any recession since the Great Depression. The fallout from the Great Recession makes it near certain that there will be yet another lost decade of income growth for typical families, whose incomes had not been boosted by the previous decade's sluggish and localized economic expansion. In its broad narrative of how the economy has failed to deliver for

most Americans over much of the past three decades, Failure by Design also offers compelling graphic evidence on jobs, incomes, wages, and other measures of economic well-being most relevant to low- and middle-income workers. Josh Bivens tracks these trends carefully, giving a lesson in economic history that is readable yet rigorous in its analysis. Intended as both a stand-alone volume and a companion to the new State of Working America website that presents all of the data underlying this cogent analysis, Failure by Design will become required reading as a road map to the economic problems that confront working Americans.

This book celebrates the modern relevance of one of the founding fathers of development economics - Kurt Martin. His thought - drawn from the central conflict of the twentieth century

between collective action and individual enterprise - has influenced a generation of scholars at one of Europe's foremost development studies faculties, the Institute of Social Studies (ISS) in The Hague. In this tribute to Kurt Martin, leading world thinkers, including Richard Nelson, Josi Antonio Ocampo, Frances Stewart, and Ben Ndulu, discuss the role of social institutions in economic development. They are complemented by leading ISS faculty, all contributing to the debate that will define the policy research agenda well into the next decade. This is an essential text for economic scholars, postgraduate students, and development

practitioners alike.

An accessible analysis of the global expansion of financial markets in poor communities, incorporating the latest thinking and evidence. The microfinance revolution has allowed more than 150 million poor people around the world to receive small loans without collateral, build up assets, and buy insurance. The idea that providing access to reliable and affordable financial services can have powerful economic and social effects has captured the imagination of policymakers, activists, bankers, and researchers around the world; the 2006 Nobel

Peace Prize went to microfinance pioneer Muhammed Yunis and Grameen Bank of Bangladesh. This book offers an accessible and engaging analysis of the global expansion of financial markets in poor communities. It introduces readers to the key ideas driving microfinance, integrating theory with empirical data and addressing a range of issues, including savings and insurance, the role of women, impact measurement, and management incentives. This second edition has been updated throughout to reflect the latest data. A new chapter on commercialization describes the rapid growth in investment in microfinance institutions and the tensions inherent in

the efforts to meet both social and financial objectives. The chapters on credit contracts, savings and insurance, and gender have been expanded substantially; a new section in the chapter on impact measurement describes the growing importance of randomized controlled trials; and the chapter on managing microfinance offers a new perspective on governance issues in transforming institutions. Appendixes and problem sets cover technical material.

How will China reform its economy as it aspires to become the next economic

superpower? It's clear that China is the world's next economic superpower. But what isn't so clear is how China will get there by the middle of this century. It now faces tremendous challenges such as fostering innovation, dealing with ageing problem and coping with a less accommodative global environment. In this book, economists from China's leading university and America's best-known think tank offer in depth analyses of these challenges. Does China have enough talent and right policy and institutional mix to transit from input-driven to innovation-driven economy? What does ageing mean, in terms of labor supply, consumption demand and social welfare

expenditure? Can China contain the environmental and climate change risks? How should the financial system be transformed in order to continuously support economic growth and keep financial risks under control? What fiscal reforms are required in order to balance between economic efficiency and social harmony? What roles should the state-owned enterprises play in the future Chinese economy? In addition, how will technological competition between the United States and China affect each country's development? Will the Chinese yuan emerge as a major reserve currency, and would this destabilize the international financial system? What will be China's role in the international economic institutions? And will the United States and other established powers accept a growing role for China and the rest of the developing world in the governance of global institutions such as the World Trade Organization and the International Monetary Fund, or will the world devolve into competing blocs? This book provides unique insights into independent analyses and policy recommendations by a group of top Chinese and American scholars. Whether China succeeds or fails in economic reform will have a large impact, not just on China's development, but also on stability and

prosperity for the whole world.

Experts address “the development puzzle”—unprecedented growth coupled with unequal distribution of that growth across different countries—and focus on the importance of institutional arrangements and norms and culture. Recent decades have seen almost unprecedented economic growth in income per capita around the world. Yet this extraordinary overall performance masks a wide variation in growth rates across different countries, with persistent underdevelopment in some parts of the

world. This disparity constitutes “the development puzzle,” and it is exemplified by growth spurts in China and India that contrast markedly with disturbingly low growth rates in sub-Saharan Africa. In this volume, economists address issues of inequality and growth, going beyond narrowly defined “economic” factors to consider the effect on growth of the structure of governance, the quality of a country's governing bodies, and the social norms that govern collective decision-making. The contributors use both formal modeling and empirical analyses to examine how the “soft factors” of institutions and norms interact with growth performance, natural resource endowments,

and economic performance. They consider such topics as the effects of decentralization in Africa, fiscal discipline in Indian states, natural resource wealth as a cause of corruption, social violence during the Indonesian financial crisis of 1997 and 1998, and the effect of strong national identity on redistributive politics. Some of their findings suggest that not only do institutions and norms affect economic performance, economic performance itself is a key factor in explaining such governance failures as corruption and the frequency and intensity of economic conflict.

If handbooks can be inspiring, this is it! Like a true companion, it takes in its stride conversations both big and small. Its entries do not just present an international and multidisciplinary mix, but true to life they work on several different scales. And, importantly, the book makes its authority evident. For it is like an extended website, but with all the added advantages of an encyclopaedia that actually tells you about the authors and the sources on which they have drawn. The resulting compilation is highly intelligent, thoughtful and above all usable. Dame Marilyn Strathern, University of Cambridge, UK The Elgar Companion to Development Studies is

a major production in the development studies field, authored by a star-studded cast of contributors. With 136 entries covering a vast range of topics, it should quickly establish itself as a leading work of reference. We should all feel indebted to David Clark, who has successfully brought this substantial publishing project to completion. John Toye, University of Oxford, UK This is a most comprehensive handbook on development studies. It brings together a wide, varied array of carefully crafted summaries of 136 key topics in development by an international cast of well-respected academics and other experts in respective areas of study. The

handbook is heavily interdisciplinary, organically combining economic, political, historical, social, cultural, institutional, ethical, and human aspects of development. While the wide range of entries might appear as a simple glossary listing or an encyclopedic collection, each of the 136 entries offers more depth and discussion than the average handbook. . . . Viewed in this light, this companion is highly likely to become known as a leading reference work on the topic. Highly recommended. Ismael Hossein-Zadeh, Choice The Elgar Companion to Development Studies is an innovative and unique reference book that includes original

contributions covering development economics as well as development studies broadly defined. This major new Companion brings together an international panel of experts from varying backgrounds who discuss theoretical, ethical and practical issues relating to economic, social, cultural, institutional, political and human aspects of development in poor countries. It also includes a selection of intellectual biographies of leading development thinkers. While the Companion is organised along the lines of an encyclopaedia, each of its 136 entries provide more depth and discussion than the average reference book. Its entries are

also extremely diverse: they draw on different social science disciplines, incorporate various mixes of theoretical and applied work, embrace a variety of methodologies and represent different views of the world. The Elgar Companion to Development Studies will therefore appeal to students, scholars, researchers, policymakers and practitioners in the field of development as well as the interested layman.

While Sub-Saharan Africa has undergone an important growth recovery, of more interest is the impact of this on the

conditions of those living on the continent. This book reviews many of the issues, which are particularly important in making economic growth more effective in reducing poverty. These include the extent to which agriculture, especially small-scale agriculture, shares in this growth; the extent of employment creation associated with growth; the nature of industrialization accompanying growth; and the impact of globalization. The volume surveys the risks and opportunities in each of these areas, with a view to understanding how growth can be associated with a better record of poverty reduction.

"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social

determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

REVIEW OF LEADING ISSUES IN ECONOMIC DEVELOPMENT UNIVERSITY OF

- Phoenix in the Ashes is a collection of six stories. They are both a demonstration of the

range of Joan Vinge's talent and an clear indication of the importance of characterization in her works. All the protagonists in these stories are alienated in some way from their culture and each must resolve their own eccentric problems. The title story involves two individuals, each an outcast in their own society, who learn to fulfill each other's needs; it strongly reminds me of the Gift of the Magi in tone. Voices From the Dust has two scientists who detest each other, but find common ground when an alien presence seizes control of their minds. The Storm King is a tale of emotional growth, as a noble boy learns empathy. The Peddler's Apprentice also has a

boy growing both emotionally and intellectually, finally gaining some measure of wisdom. Psiren has Cat coming to grips with his power and guilt. Mother and Child tells of an alien who develops a degree of affection and appreciation for humanity through his contact with a human woman and her child. Each of these stories involves an individual who is in some way almost unique in their society, but these stories have a larger theme of the uniqueness of all persons. They seem to say, forget the averages and concentrate on the distinctly different aspects of each person. The only problem I have with Joan D. Vinge is that

she doesn't write enough. Of course, quantity doesn't replace quality. And Vinge exemplifies quality to me. Enjoy!-

- "Dreams were nothing but diving boards for disappointment. The higher you climbed, the deeper you plunged." This sentiment could describe my reading experiences this year, until Baby, Oh Baby. In fact, it gets my early, albeit imaginary, vote for Best Contemporary for 2001. The characters were deeply realistic, yet likeable. Jake's return to the fertility clinic ("The clinic was sterile. Just like the patients who came here.") made me choke up. Annie's attention to "signs" and intuition was

touching, not silly. Her steadfast resolve not to be second place was admirable: "I want a no-holds-barred, not-holding-anything-back, in-it-with-everything-

I've-got kind of love." The ending scene at the courthouse was perfect, and had me singing along..."Baby, oh baby..."
