Art Carpenter demystifies the powerful REPORT procedure and shows you how to incorporate this highly flexible and customizable procedure into your

SAS reporting programs. Combining his years of SAS experience with a talent for instruction, Art offers clear and comprehensive coverage that demonstrates how valuable this procedure is for both summarizing and displaying data. Illustrated with more than two hundred examples and sample exercises to reinforce your learning, Carpenter's Complete Guide to the SAS REPORT Procedure provides you with information that you can put to immediate use. The text is divided into three distinct sections. Part 1 introduces you to PROC REPORT, showing you how it works and "thinks." This section is designed to be read linearly by users who

are unfamiliar with the procedure. Part 2 is a collection of increasingly more complex examples that feature advanced options and capabilities. It also introduces the relationship between PROC REPORT and the Output Delivery System (ODS). Part 3 incorporates the options and statements described in Parts 1 and 2 into a series of examples that highlight many of the extended capabilities of PROC REPORT. Included in this section is a discussion of a few ODS statements and options that might be useful to a PROC REPORT programmer, plus an in-depth look at the PROC REPORT process itself, especially as it relates to the execution of

compute blocks. Art's author page at support.sas.com/carpenter includes the following bonus material: example SAS data sets, example results, and a compilation of nearly 100 related conference papers. This book is part of the SAS Press program.

Multiple-Plot Displays Open Road Media

A courageous female journalist's classic exposé of the horrific treatment of the mentally ill in nineteenth-century America In 1887, Nellie Bly accepted an assignment from publisher Joseph Pulitzer of the New York World and went undercover at the lunatic asylum on Blackwell Island, America's first municipal mental

hospital. Calling herself “Nellie Brown,” she was able to convince policemen, a judge, and a series of doctors of her madness with a few well-practiced facial expressions of derangement. At the institution, Bly discovered the stuff of nightmares. Mentally ill patients were fed rotten, inedible food; violently abused by a brutal, uncaring staff; and misdiagnosed, mistreated, or generally ignored by the doctors and so-called mental health experts entrusted with their care. To her horror, Bly encountered sane patients who had been committed on the barest of pretenses and came to the shocking realization that, while the Blackwell Island

asylum was remarkably easy to get into, it was nearly impossible to leave. This ebook has been professionally proofread to ensure accuracy and readability on all devices.

Running from her past, Rachel answers an advert to be a live-in assistant to glamorous and eccentric author Dorothy Winters. But

behind the closed doors of Dorothy's house, she quickly discovers that nothing is as it seems. When Dorothy's manuscript throws up striking similarities to events in Rachel's own life, she becomes convinced that the past she's tried to hide is catching up with her. Then the phone calls start. The parcel arrives. The blood shows up in the bathroom. And Dorothy's friend disappears. Terrified of being blamed for murder, Rachel has nobody left to turn to. Because who can she believe when she doesn't even trust herself...?

Data mining is the process of automatically searching large volumes of data for models and patterns using computational techniques from statistics, machine learning and information theory; it is the ideal tool for such an extraction of knowledge. Data mining is usually associated with a business or an organization's need to identify trends and profiles, allowing, for example, retailers to discover patterns on which to base marketing objectives. This book looks at both classical and recent

techniques of data mining, such as clustering, discriminant analysis, logistic regression, generalized linear models, regularized regression, PLS regression, decision trees, neural networks, support vector machines, Vapnik theory, naive Bayesian classifier, ensemble learning and detection of association rules. They are discussed along with illustrative examples throughout the book to explain the theory of these methods, as well as their strengths and limitations. Key Features: Presents a comprehensive introduction to all techniques used in data mining and statistical learning, from classical to latest techniques. Starts from

basic principles up to advanced concepts. Includes many step-by-step examples with the main software (R, SAS, IBM SPSS) as well as a thorough discussion and comparison of those software. Gives practical tips for data mining implementation to solve real world problems. Looks at a range of tools and applications, such as association rules, web mining and text mining, with a special focus on credit scoring. Supported by an accompanying website hosting datasets and user analysis. Statisticians and business intelligence analysts, students as well as computer science, biology, marketing and financial risk professionals in both commercial and government

organizations across all business and industry sectors will benefit from this book.
