This is volume 3 of 3 (black and white) of "College Physics," originally published under a CC-BY license by Openstax College, a unit of Rice University. Links to the free PDF's of all three volumes and the full volume are at <http://textbookequity.org> This text is intended for one-year introductory courses requiring algebra and some trigonometry, but no calculus. College Physics is organized such that topics are introduced conceptually with a steady progression to precise definitions and analytical applications. The analytical aspect (problem solving) is tied back to the conceptual before moving on to another topic. Each introductory chapter, for example, opens with an engaging photograph relevant to the subject of the chapter and interesting applications that are easy for most students to visualize.

REVIEW OF OPENSTAX COLLEGE PHYSICS SOLUTIONS MANUAL

- Dr. Emoto could easily change the title of his series of books to the one I use above. What struck me as I read this book was the fact that what Dr. Emoto was witness to was the power of our thoughts. Our thoughts contain energy and that energy is transmitted to...water, other people, our own experience of reality. Dr. Emoto's photographs, at least in those cases where he pointed the energy of words or thoughts at the water and then photographed the crystalline structure, document the power of our thoughts. So what became obvious to me is that water is a mutable substance able to readily reflect energy back to us. I was less certain that abused water itself holds an imperfect form as opposed to holding the view of the researcher toward that abuse.

In other words, the scientist truly impacts what he or she is studying in the case of water. It is my impression that water contains a natural energy, as suggested in the books by Viktor Schauberger. You may also learn more about that at www.cleanairpurewater.com. And while Dr. Emoto's photographs are extremely impressive and suggestive I was led to wonder how one could actually measure the health of water through photographs without inserting subjective interpretation. In other words, if water reflects our thoughts so readily, how can we 'see' it without also affecting it? Dr. Emoto's books are most fascinating but I'm not at all certain that the apparent insinuation is all that exists. Water in its natural state is indeed poorly understood by this species that acts as if it knows all....

- If you haven't seen the film (it's out on DVD right now), then you'll be amazed to see Emoto's new book, *The Hidden Messages in Water*. Back in the '90s, Emoto -scientific researcher, doctor of alternative medicine and lecturer - discovered that water exposed to words, photographs and music were enormously affected on it as evidenced by the crystals that formed when the water was frozen. When the water was exposed to loving positive words and music, the crystals formed vibrantly-coloured complex and complete snowflake patterns. Under negative exposure the patterns were dull in colour and incomplete, often chaotic. In 1999, unable to get his fascinating results published, Emoto resorted to simply printing out his now famous high-speed photographs, selling them and giving them away in an effort to deliver his beautiful message. Having self-published three books now (*The Message of Water I, II and III*), Emoto finally saw his

discovery published last year as *The Hidden Messages in Water*. Although this book has only a small portion of the actual photographs, the cover alone caused shivers to go right up into my scalp. Truth has that effect. If we, like the planet, are made up of 70% water, then Emoto strongly suggests that we should

therefore be able to heal ourselves and the planet by conscious loving. If water is, as has been defined, the interface between the dimensions in which we live and the dimensions of our soul, then we cannot ignore this clear vision.
