REVIEW OF ACTIVE TOWED ARRAY SONAR ACTAS OUTSTANDING OVER THE

- I was very excited when I found this

book. Gardening and Wicca - what could be better!?! Obviously, quite a bit could be better. I was very, very disappointed and quite honestly very disturbed that a self-proclaimed practicing witch condones the use of pesticides and chemicals. Excuse me, but what happened to "HARM NONE"? Anyone with an elementary knowledge of nature knows that any chemicals and pesticides used in the garden kill bees (an extremely vital link in our ecological chain), not to mention other beneficial insects. After one season of being plagued with squash beetles, she gave up and used chemicals!?!? What does that teach anyone? If you truly want to be in balance with nature, you must be a purist or at the very least practicing organic methods (beware some organic

products harm bees too). There are ways to save your crops and not damage the environment. The great wise women and men of old didn't have Miracle-Gro and bug spray. Please. They learned to live in balance with nature and let nature help them.

- ...and one of my favorites. I've been in the Craft over 21 years now and Power of the Witch is still at the top of my "recommended" list. Laurie Cabot was partially responsible for my realization that magick and Witchcraft were far more than rote words spoken in a ritual aimed at 'changing perceptions'. I couldn't find many books about magick when I first entered the Craft and as a solitary practitioner, I latched onto those few that really *clicked* for me. Now, years later, with a number of books

under my own belt, I still haul out *Power of the Witch* and read through it, and I still recommend it highly as a guide to the Craft. Grounded, non-fluffy, intelligently written, this book is a good reference for anyone who is out to buck

the trendiness of modern Wicca, without leaning on the stuffiness that can accompany traditionalist views of the Craft. Yasmine Galenorn--author of *Embracing The Moon*.
