**REVIEW OF IIT CHEMISTRY BY O P AGARWAL
FREEFILESFROMBLOG NET**

- Reading this book I recalled the underlying tension at my undergrad university where the Sociology & Psychology departments were in adjoining buildings. The author seems to have an interest in usurping a dominant role for Soc in defining

the world, its spinings and actors. That said - it is a good casual overview of sociology and sociological thinking. Reading it as a Grad student having been away from academic sociology for 20 years - this is a good brush-up. I do find some passages overly literary pushing metaphors that only confuse me.

- I was greatly disappointed in this book. It is not about the space

program, but rather about the MANNED space program: primarily Mercury, Gemini, and Apollo. There is still a need for a short overall appreciation of the space program. Planetary exploration and space astronomy are missing, as are the applications: communications, weather, and remote sensing. T.A. Heppenheimer's recent book may be the best general work on space.
