Engineering curricula are notoriously demanding. One way to make the material easier to grasp and more fun to learn is to emphasize the experimental or "hands-on" aspects of engineering problems. This unique book is about learning through active participation in laboratory experiments, and it specifically aims to dispel some of the mystery so many students associate with the study of thermodynamics and heat transfer. In it, the author presents a

collection of experiments in heat transfer and thermodynamics contributed by leading engineering educators. The experiments have been tested, evaluated, and proved successful for classroom use. Each experiment follows the same step-by-step format, which includes the objective of the experiment, apparatus needed, procedure, suggested headings, and references. The experiments use apparatus that is easily built or attainable. Among the topics covered are heat conduction, convection, boiling, mixing, diffusion, radiation, heat pipes and exchangers, and thermodynamics. The book will be especially useful as a companion

to standard heat transfer and thermodynamics texts.

REVIEW OF G 10 ENGINE

- Some of the stories in here are great and others are just heavy reading. The editor needed to remove some of the preachy and slow moving ones which unfortunately make up over half the book. The first stories about Brillo the Ram are hilarious and as a sheep raiser (Romney and Border Leicester) I can vouch for their authenticity. I too have had problems with tricky rams who want to breed when you don't want them to. Ewes have no concept of a standard and are going to breed who they want if you give them a choice or they can make one. After we get away from Brillo

and his escapades and the musical that is made by the drama club on him which is quite entertaining, it got boring very quickly. There are one or two more stories after that that are good but the rest unfortunately are not. If you are looking for an irreplaceable part of the alternate history being created by Eric Flint you can skip this one because it is only going to get a slight mention in the other main stories such as The Baltic War.

- I truly believe that this is the only book you need to read. It has all the concepts, theories about the story. Densely written and every sentence has concept, theory in it. Starts with the history of cosmology and continues with Cosmological Models,

Origin of Galaxies, theory of Galaxy formations and star formations and future of the Universe. Inflation and other theories are all covered to the extend that space allows. What I liked most in this book is that it covers everything and you do not need to read ten books to get the idea complete. For more technical oriented

person, book has Mathematical section at the end describing the concepts with formulas. Author always gives brief description of concepts and usually he explains any conclusion with reasons so that if you can not derive the conclusion by yourself there is the reason. This book together with Kip Throne's beautiful book on Black Holes will make it complete.
