Getting the right diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to *Improving Diagnosis in Health Care*, diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological

or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. *Improving Diagnosis in Health Care* a continuation of the landmark Institute of Medicine reports *To Err Is Human* (2000) and *Crossing the Quality Chasm* (2001) finds that diagnosis-and, in particular, the occurrence of diagnostic errors"has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of *Improving Diagnosis in Health Care* contribute to the growing momentum for change in this crucial area of health care quality and safety.

Clinical Examination Elsevier Health Sciences

This classic textbook sets out clearly and concisely how to evaluate symptoms and elicit relevant physical signs. It describes the practical skills which every clinician must acquire and develop in order to evolve diagnostic procedures and management strategies and plans. 'Highly Commended' in the 2006 and 2010 BMA Medical Book Competitions, this Thirteenth Edition contains over 500 clinical photographs and diagrams to illustrate the text, with new topics added

to make the book even more comprehensive. This Thirteenth Edition has four sections: History taking and general examination. System examination covering symptoms and signs. Examination in special situations including babies & children and the critically ill. How to pass an OSCE. Included on the Student Consult site are the specially-recorded videos demonstrating many of the clinical examination routines described in the main text. The book starts with a general overview section on history taking and the general examination that provide the framework on which to hang the detail. The systematic examination section documents clearly the relevant history, examination and special investigations as well as giving advice on their significance. The third section covers examination in specific situations and emphasises an integrated and structured approach to these patients. A final section spells out how to demonstrate the techniques learned in the book in an OSCE. Macleod's is closely linked to its sister publication, Davidson's Principles & Practice of Medicine, which complements the information in this text. Available with full online access on Student Consult and ancillary videos demonstrating key clinical examination routines following the format laid out in the book. There are two new chapters on examination in specific situations: The frail elderly The adult with fever A new section explicitly spells out how to demonstrate the techniques learned in the book in an OSCE and other formative and summative examinations. Over 50 new text boxes highlight the evidence-base for the examination techniques discussed. An Advisory Board of students, junior doctors, and representatives from the nursing,

ambulance, Primary Care and academic communities from six countries has made detailed comments and critically appraised the entire book. The text has been substantially rewritten with more on medically unexplained symptoms in the History Taking chapter and extended coverage of diabetes mellitus in the Endocrine System chapter. Integrated with the online text are clinical examination videos of trained professionals performing many of the examination routines described in the book with an accompanying commentary by the Editor, Professor Colin Robertson Two new videos show how the Glasgow Coma Scale should be performed in clinical situations, demonstrating the correct techniques and also common pitfalls in using the GCS.

Improving Diagnosis in Health Care W B Saunders Company

It is one of the most extraordinary cases in the history of science: the mating calls of insects were mistaken for a “sonic weapon” that led to a major diplomatic row. Since August 2017, the world media has been absorbed in the “attack” on diplomats from the American and Canadian Embassies in Cuba. While physicians treating victims have described it as a novel and perplexing condition that involves an array of complaints including brain damage, the authors present compelling evidence that mass psychogenic illness was the cause of “Havana Syndrome.” This mysterious condition that has baffled experts is explored across 11-chapters which offer insights by a prominent neurologist and an expert on psychogenic illness. A lively and enthralling read, the authors explore the history of similar scares from the 18th century belief that sounds from certain musical instruments were harmful to human health, to 19th century cases of “telephone shock,” and more contemporary panics involving people living near wind turbines that have been tied to a variety of health complaints. The authors provide dozens of examples of kindred episodes of mass hysteria throughout history, in addition to psychosomatic conditions and even the role of insects in triggering outbreaks. Havana Syndrome: Mass Psychogenic

Illness and the Real Story Behind the Embassy Mystery and Hysteria is a scientific detective story and a case study in the social construction of mass psychogenic illness.

Elsevier Health Sciences

Fully revised, this is an updated new edition of a much-loved book which has built a reputation for pithy, entertaining good sense over the course of six editions. 'Children are different. Paediatrics is much more than medicine miniaturised.' From reviews of the previous edition: 'All in all a very handy book for the student, the resident or other professionals working with children. I had a lot of fun reading it.' 'The book is full of wonderful illustrations, and funny and profound advice with quotations, like the words of Sir Dominic Corrigan (1853): "The trouble with many doctors is not that they do not know enough but that they do not see enough", or the advice to teach thy tongue to say "I do not know" (Rabbi Moses Maimonides or Rambam, 1135-1204). I have used this book for my final medical year paediatrics exams, the DCH and the MRCP and it has been a great help. It reminds us of the most important and basic things - history and examination, and of course a friendly demeanour.' Short, manageable chapters Clinical examples of examination techniques Very helpful tips

and topics section Clinical checklists Simply illustrated Updated throughout New section of 'questions of fives' questions Short glossary of Latin terms

REVIEW OF PHYSICAL EXAMINATION HEALTH ASSESSMENT 6TH EDITION ANSWERS

- I (and many others) believe the best place to start with Doc Smith's "Lensman" series is Galactic Patrol; and as I've said why, at length, in my review of that opus, I won't repeat it here. Furthermore, if you've already read "Patrol" and Gray Lensman with enjoyment, you'll hardly need my urging to continue. This is nonetheless probably the weakest of the four main Lensman novels, mainly because of Smith's often-noted discomfort with female characters. It is a curious reflection on his powers as

a writer that he can make a thoroughly convincing — even likeable! — character of a thirty-foot, crocodile-headed, winged python with eyes that come out on stalks, but can't manage the matriarch of a tribe of human Amazons (from the planet Lyrane II). We cannot, to be sure, be surprised that Kinnison's skills at handling females are so deficient: after all, he's spent his formative years galumphing around the Galaxy in search of the arch-villain Helmuth, not hanging out like a normal teenager. Military genius he may be, but socially he's still an adolescent. (Although... perhaps he's not *quite* as inexperienced as all that? Exactly what *were* his experiences as a Cadet with that "bedroom-eyed Aldebaranian hell-cat", the stunningly beautiful Dessa Desplaines? Whatever they were, they obviously left quite an impression: Kinnison — normally unflappable even by outré developments like hyperspatial tubes materialising in the same room with him — is reduced to a jelly at the mere thought of meeting her again.) Still, be all that as it may, "Second Stage" has many compensating pleasures, not least the exploits of Nadreck, the cowardly four-dimensional Palainian lensman. And it leads into one of the strongest finishes of any science fiction series, as Kim and Clarissa's offspring carry the struggle to its climax in Children of the Lens. BTW, the correct title is "Second Stage LensMEN" — and has been ever since 1941!

- The really sad thing about this book is that, although we might be entertained, and it sure feels good if nothing else to verbally abuse the bad boys of corporate America, it is all so morosely ineffectual and after the fact. How many of the CEOs that columnist (and currently

independent candidate for governor of California) Arianna Huffington lambasts here will actually do any jail time? How many will pay fines that are more than a fraction of the benefits they have already received, benefits they have reinvested, benefits that are drawing dividends, interest and influence? How many will even find their lavish lifestyles amended in the slightest? The answer my friend is probably zero. And so it goes (wrote Kurt Vonnegut Jr. in *Slaughterhouse Five*, but that's another story). In the long run whether corporate executives will continue to find the means to rip off their shareholders is of little moment. Let's say each visible pig managed to steal one way or the other an average of \$40-million from his corporation; and let's say there are one thousand such swine. How much does that cost us? Forty million times a thousand is \$40-billion big ones, or as Evertt Dirksen used to say, a billion here, a billion there, and pretty soon we're talking real money. Notice, by the way, that in small companies or in a business that you may happen to own, there is absolutely no chance that you could get away with ripping off...yourself! Furthermore, remember that these oinkers have to spend that money on conspicuous consumption of some kind, a house on Long Island, an apartment in Manhattan, a yacht berth at Martha's Vineyard, Picassos and Rembrandts, a mistress, Chateau Petrus and Cuban cigars. So some of it trickles down, and for most of us poor souls in the unemployment line (God, we're hardly alive! relatively speaking) it really doesn't matter much. What does matter is how corporations are able to gain unnatural influence over our elected officials and thereby rip off the

government, the environment, pollute the water and the air, drive smaller businessmen out of business, purchase public lands at garage sale prices, economically ensnare millions of workers (and then dump them when the time is ripe), and guess what, nobody can be held responsible! I wish Ms Huffington had focused on these more substantial crimes of corporate America and on the way the system works to shield them and their execs from any real accountability. I did enjoy her numerous flights of nasty rhetoric and the befuddling array of facts and figures she presents (I assume they are mostly right), and I have a lot of sympathy for those who got their pension funds shortchanged while the CEOs golden-parachuted on gossamer wings to the French Riviera or Barbados or a ranch in Texas. I even feel some sympathy for the poor slob who bought Enron at ninety bucks and change or WorldCom at sixty-four fifty (see p. 41). And it is true she has a table on page 115 entitled "Buying Congress" which lists the top five senators and top five congressmen in terms of campaign contributions from the accounting industry, 1989-2001. The salient thing to notice, however, is that there are exactly five democrats and five republicans on the list. What does that tell us about how things are going to go in the future? With both political parties feeding heartily at the trough is there any chance that any of what Huffington rails against will change? The answer my friend is the null set. Until the laws of the land are changed so that corporations AND their executives are held responsible for their actions, business will continue as usual. The rich will grow obscenely more rich, and someone, somewhere, who doesn't deserve, it will get ripped off once again. And so it goes.
