We hope this post has motivated you to check out Designing Better Maps A For

Gis S, connect with fellow visitors, and create your very own evaluations. Happy reading!

REVIEW OF DESIGNING BETTER MAPS A FOR GIS S

- Students and various e-mail correspondents often ask me which single-volume Shakespeare edition I would recommend, and I never hesitate in naming this one, as I think it has a long lead over its rivals. I have myself used the 1992 printing with amazing frequency both in research and in teaching, and always with advantage. Why is this the best edition

for a reader who wants as much as possible within the confines of a single book? First, it should be pointed out that unannotated editions such as the Oxford Complete Works are all in all of comparatively little use as even expert Renaissance scholars - leave alone inexperienced readers - cannot read Shakespeare's language unaided; there are simply far too many words, features of grammar, etc., which a modern reader is certain to interpret inaccurately or not to understand at all. So it is essential to have intelligent and well-informed annotation that will help one to understand the text. Bevington's is extraordinarily good: knowledgeable, precise, and helpfully clear. Second, an editor needs to be able to produce a responsible modernised text.

Shakespeare cannot be understood by many unless he is read in modern spelling, and the punctuation of his period, too, often leads most modern readers astray. Bevington's modernisation of the text is exemplary. Furthermore, his handling of the many thorny textual problems is also outstanding for the knowledge and the judgement that he brings to bear. For example, the Oxford people unwisely and on poor grounds print two separate versions of *King Lear*, and Bevington has been exceptional in rejecting that approach and producing a persuasively and intelligibly "conflated" text (much better, by the way, than the conflated version in the Arden text edited in 1997 by R.A. Foakes). Most readers of the plays who are not already quite familiar

with them will want good, perceptive and comprehensive introductions to them, and in this area, too, Bevington excels, demonstrating an awareness of modern approaches and interests without falling victim to trendiness. He offers introductions which are never dull but, however exciting and illuminating, always sensible. The general introductory and accompanying material made available elsewhere in the book is equally useful, revealing, and accurate; and the book is well produced. It is amazingly cheap for the remarkable value it offers. This, then, is not only the best single-volume Shakespeare available, but is by any standard as good an edition as anyone could possibly expect. I add that in my personal view Bevington is probably the only scholar at

present alive who could have produced so excellent a single-volume edition. Unreservedly recommended.

- I have read all of Child's collaborations with Douglas Preston and have generally liked them-some of their stories are among my favorites. I have also read Child's and Preston's solo books and they have never been quite as good as their team efforts. Much like Child's last solo work, Utopia, this book starts with an interesting premise that grips the reader, but it degenerates as the technology is introduced and fails to follow through with an equally compelling ending. The story begins with the apparent suicide of a couple that were supposedly perfectly matched by the Eden corporation. The main character, a forensic psychologist named

Christopher Lash, is brought in to determine why this happened. Then a second perfectly matched couple commits double-suicide and the intrigue builds. At this point, Lash is exposed to the highly secretive operations of Eden and their extensive matching process and this is where the story begins to lose credibility. The matching process accumulates a massive amount of data that are analyzed by a super computer named Liza. We are told that Liza is based on artificial intelligence concepts and is actually self-aware and can learn. We are supposed to believe that Liza is by far the the most powerful and advanced computer in the world and yet it is owned by a private company and used primarily as a matchmaker? We are told that some of the early funding to

build Liza came from the government and that Liza does contracting work for various Federal agencies, but the fact that Liza is not under government control is too unbelievable. Another ridiculous aspect of Liza is her construction. She is cobbled together with computers dating back to the 1960's! Anyone who has ever tried to install a CD/DVD drive or a new operating system is aware of the considerable compatibility issues with computers. And yet we are supposed to believe that the world's most advanced system is pieced together with Apple II's, Commodore 64's, and whatever else could be found. Finally, the data

gathering is over the top and highly illegal. Liza has access to clients' (and Eden employees') internet-related data: bank/credit card records, traffic tickets/criminal records, etc. I can believe that clients would allow this, but Liza has unfettered access to rejected clients and the general public and constantly spies on them! Liza: the world's most advanced hacker! Overall the characters are well written and their dialog is not distractingly bad. But the book is pretty short and the ending unoriginal. As I read it I couldn't help but think this was a cross between Wargames and The Lawnmower Man. I do not regret reading it, but I was disappointed with it.
