[A Step-By-Step Tutorial for Beginners to Learn Excel VBA Programming from Scratch](#) John Wiley & Sons

Microsoft Excel has, over the years, become the greatest software in the field of electronic worksheets. Its strength is that it meets the demands of huge numbers of users

worldwide.

Nonetheless - despite the advancement and expanding use of this software - there is ever-increasing demand from the end users; much of which can only be solved by VBA programming (Visual Basic for Applications).

Therefore, "Excel VBA - In Everyday Language" was written in order to provide a response to the growing demand for the advanced capabilities of Microsoft Excel. This book was written: * For the "non-programmers" among us who have to create the same reports in Microsoft Excel time and again, and would like to automate the process. * For people who wish to develop forms, screens and "machines" for data management within

their organization. *

For individuals who wish to turn Microsoft Excel into a powerful tool in their daily work. During the writing process I tried to visualize Microsoft Excel software and the VB editor through the eyes of the end users; people who may not have programming background, but aspire to reap the utmost from the program. For this reason the book, based on many years' of experience in programming and training, has been written in everyday language, using as few technical terms as possible, to make for easy reading. My goal, when writing this book, was to convey the main principles of VBA language and allow beginners, taking their first steps, to learn

without requiring individual training. For this purpose there are files of exercises accompanying the book. These may be downloaded from this link. The exercise files are in .xls format, allowing the end users to use either the "Ribbon Versions" (2007 and higher) or other older versions of Microsoft Excel. This new edition has undergone extensive processing and addresses Microsoft Excel 2010/2013 users, along with explanations for anyone using the older versions (2003 and 2007). Therefore, wherever there is a significant difference between Excel 2010/2013 and the old versions, explanations are provided in full. While reading the book

and using the practice files, you will know to:

- * Add the Developer Tab
- * Change Excel's security, Including trusted locations
- * Enter the VBE (Visual Basic Editor)
- * Change the VBE structure
- * Record an absolute macro
- * Record a relative macro
- * Improve your recorded macro
- * Apply to ranges (Cells, ranges, columns, rows, sheets, offset)
- * Use Variables
- * Use the 'With' command
- * Manipulate strings
- * Calculate Date and Time
- * Interact with the user (Msgbox and Inputbox)
- * Use conditions (IF)
- * Loop through data (Do loops, For loops)
- * Create your own functions (UDF)
- * Create an Event macro
- * Handle Errors

REVIEW OF BEGINNING EXCEL VBA

- Hello, my name is Kristy Okoren. I'm 12 yr. old and in the 7grade. I go to the Cadillac Middle School.

I'm writing you this letter because my class just got done reading, *The Giver*. We have also read *Number the Stars*, it was really sad and I'm glad that I wasn't around when that happened. So in *Number the Stars* did the two girls ever see each other again? Well I think you should write another book that goes with *Number the Stars*, and why I think you should is because some people including me, would like to know if they ever saw each other or if they don't make it. We just got done reading *The Giver*. It was really weird and I had a hard time understanding it. So can you help me understand why the community doesn't have the real parents take care of their children and why does

the Birthmother have to be released after 3 children? I would like you to write another book that tells what happens to Jonas and Gabe. I would like them to still be alive and for them to start a new life and go on from there! Well I better finish my letter up to you by saying that I plan to read your other books and looking forward to a next series to *The Giver* and *Number the Stars*.

- *The Giver* BY Tori Hall thought the book *The Giver* was ok. The beginning of the book started out good but as the book went on I found that it got strange. The book took on a very science fiction sense as it got into the book. The book changed from being a book about a different community to being a

book that kept talking about people killing other people with shots. I found it changed around too much through out the book to really enjoy it. And last of all the ending left me confused. I did not know if the main character Jonas had

died or if he found A different place or what. I think another factor that made me not really enjoy the book is the fact that we had to read it for school. When you are forced to read something you do not enjoy it as much as if you choose to read it.
