REVIEW OF POKEMON BLACK WHITE 2 GUIDE

• Not being a lawyer, but associated with Federal Law enforcement for 29 years, I have the following comments based on a professional experience with the subject, at least tangentially, and perhaps more importantly, with the reptition and irrelevant material which would have been tossed in a court of law. Repitition and irrelevance may have their place in fiction, but do not add anything more to the subject than weight-not intellectual, but weight of the paper pulp used to print the book.WDC may be able to pass all the laws the enviornmentalists want. I would not disagree with a subject that I do not have a professional or moral right. However, I do have a professional opinion worthy of respect, that NO law is worth a pot of is it can not be enforced. Or if the law is so poorly written, it can not possibly be enforced. Or using Prohibition as an example, a law with a dubious good intention that had horrible consequences.Lastly, I would note that gathering evidence is not just the tool of the scientist, but also the tool of the

investigator. The "peer" review by members of the same class, do not compete with the combat in the courtroom. No opinions are allowed. No anecdotal evidence is given any weight. The world of academia does have its competitive adversarial battles, but before those battles for grants, recognition and economic rewards begin, they must first pass a gate established by academia itself. Not many BA candidates get very far if they do not toe the "correct" parameters to pass, get into prestigious schools, and have the correct connections to publish. I would note that the authors lengthy book basically ignores the problem of law enforcement primarily by blaming past problems of previous owners no longer being legally responsible for their toxic wastes. As someone who actually lives in an agricultural area, and has to deal with current attempts to clean the Chesapeake Bay runoff area, I have come into contact with a number of incompetent Federal and state employees. Although I do not have any degree in any environmental courses, I do have studied logic, and from my law enforcement experience, I can recognize a problem when alleged experts have conflicting views. When one government department is satisfied, should anyone be surprised when some more violable persons start bringing weapons into public hearings. That's not good. As someone who has had to stand between two angry groups, some of whom were armed, I

yearned for "common sense" I believe our ancestors must have had. We could not have become the great nation we are today, and the lack of that common sense seems to be leading us into the same illogical illusion created by those years of prohibition.

- I am very interested in the topic of this book, but the book itself is overly long, meandering, and generally a boring read. Which by the way was my opinion of Guns Germs and Steel, except that GGS was even worse. Diamond clearly shows his leftist bias on several occasions, i.e. when discussing Montana, Los Angeles, Haiti, or the Dominican Republic. The length of the book is crushing, and the author repeats himself a lot, e.g. when discussing the Vikings in Greenland or New Guinea's natives. There are also plenty of irrelevant details which should have been edited out to shorten the book and make the narrative tighter, e.g. how the Inuit (eskimos) hunt seals or whales (and I mean, every detail is described: what kind of leather or wood implement is used and how). On the bright side, if you can put up with its length, the book does describe various environmental problems and how some civilizations succumbed to them and how some others changed course and survived. The monumental environmental problems of Australia and China are also well described - two sections that I found very interesting.
