REVIEW OF INTRODUCTION TO POLITICAL SCIENCE SAYLOR

- THE SEA OF GRASS is thought by some to be one of the classics of Western fiction. It was originally published in serial form by the "Saturday Evening Post" in 1936. Later, it was made into a movie, directed by Elia Kazan and starring Spencer Tracy and Katherine Hepburn. As a novel, 75 years later, it is only fair. The plot revolves around three characters: Colonel Jim Brewton, a powerful John Wayne-type cattle baron, who runs his vast empire on a "sea of grass" in the 1890s; Lutie Brewton, a highly charming and sophisticated

woman whom Brewton "imports" from Missouri to be his wife on the isolated plains; and Brock Brewton, the third of Lutie's children who it is eventually revealed was actually sired by Brice Chamberlain, Jim Brewton's political nemesis. The major problem with the novel, at least for me, is that the actions of these three characters, as well as what must be their underlying motivations, are more those of Greek gods than actual human beings, and the overall story is more a mythical tragedy than something that rings true to human experience. The second problem I have with the novel is that in general the prose is too clichéd and infused with the tropes and conventional images of Western fiction. It's not full-blown Louis L'Amour, but it is too far down that trail

for my taste. On the other hand, an aspect of the novel that I appreciated was its depiction of the conflict between open-range cattle ranching and "nesting" (farming or homesteading) and their disparate effects on the land. At the beginning of the novel, Jim Brewton grazed his 70,000 head of cattle on public lands covering an idyllic "sea of grass" that rose to a rider's stirrups. But the federal government, for populist reasons, pursued policies that eventually unleashed hordes of nesters on the land to farm it, which entailed fencing it and plowing over of the sod and native grasses. Aided by the fortuitous timing of a few unusually wet years, the nesters initially were prosperous, but then the normal dry conditions returned, the farms withered,

the land was ruined, and the sea of grass was gone forever. All this is reminiscent of several recent books (such as "The Worst Hard Time" by Timothy Egan and "Grassland" by Richard Manning) about the misguided - indeed, disastrous - farming of the Great Plains over the decades leading up to the dust storms of the Great Depression. Another plus, for me, is that the novel is set in New Mexico, and as I read it I was challenged to figure out more precisely where in New Mexico. The town closest to the headquarters of Brewton's cattle operations is something called Salt Fork, which is on a river and on the railroad and sits astride the Chihuahua Trail (or the Camino Real). All this would point to Salt Fork being located somewhere between present-day Socorro and Truth

or Consequences. But if that is the case, where the hell was the "sea of grass"? (I would appreciate any informed opinions.) 2.5 stars, rounded up based on a coin toss.

- Visual Basic and Shell Extension? I

thought it should be Visual C++'s territory. The book proves Visual Basic can do anything as Visual C++ can. It might take more works to finish the same task compared to Visual C++ but the experience is simply rewarding and fun.
