## REVIEW OF OPTICAL SYSTEMS DESIGN WITH ZEMAX OPTICSTUDIO

- This is a fun book. He has plenty of lists that are oft times humorous but sometimes rather banal. The "sure sign that you're doomed" list has been gone over so many times that we all know the jokes about characters that go down the steps to investigate the noise or who have important information to tell the protagonist. None of the lists are particularly illuminating, but many are funny and that's really all this book is aiming for. Unfortunately, this book is also so thin that it takes less than an hour to read. While that's great for a gift book or a book that you find in the dollar bin, paying full price seems ridiculous.

- This book is very easy to read, I couldn't put it down (I read it in 4 hours).Very useful to public defenders, prosecutors, investigative officers, coroners, psychologists, etc. It gives a view of death investigations (forensics) as an art and not a science. The author takes you step by step through crime scenes depicting details that are gruesome and not for someone with a weak stomach. Overall, the author is very good and almost feels as if you are watching a horror movie. I recommend this book to anyone who works with death scenes, criminals and law enforcement.
