Chemistry 2e Royal Society of Chemistry

How to interpret meteorological measurements made at a given level over a surface with regard to characteristic properties such as roughness, albedo, heat, moisture, carbon dioxide, and other gases is an old question which goes back to the very beginnings of modern micrometeorology. It is made even more challenging when it is unclear whether these measurements are only valid for this point/region and precisely describe the conditions there, or if they are also influenced by surrounding areas. After 50 years of field experiments, it has become both apparent and problematic that meteorological measurements are influenced from surfaces on the windward side. As such, extending these measurements for inhomogeneous experimental sites requires a quantitative understanding of these influences. When combined with atmospheric transport models similar to air pollution models, the 'footprint' concept - a fundamental approach introduced roughly 20 years ago - provides us with information on whether or not the condition of upwind site homogeneity is fulfilled. Since these first models, the development of more scientifically based versions, validation experiments and applications has advanced rapidly. The aim of this book is to provide an overview of these developments, to analyze present deficits, to describe applications and to advance this topic at the forefront of micrometeorological research.

REVIEW OF ACTIVE CHEMISTRY FLORIDA EDITION

- This book is great of professional writing tips. It is an easy read. Will help you write and get to the point.
- This fascinating novel gives a portrait of the well-to-do upper class in 19th century Saint Petersburg. Like most his other work, after having set the initial setting, Dostoyevski peels off only a thin layer of civilization to reveal raw greed, insane jealousy and hysteria in most of the main characters. The book's 900 pages are divided in four parts, of which the first part is by far the most engaging. After having set the stage in this first part however, Dostoyevski seems unable to bring the many plotlines to a satisfactory conclusion. The plot gets complicated by the introduction of too many side characters, and the main players lose much of their colour. The book is definitely too long. After part one, the fascinating Nastassia Philippovna is degraded to an abstract background character. Also, prince Muichkine's naveté is not as pure anymore. Although the book gets tedious at times, there are two flashes of brilliance which makes the latter parts a rewarding read. In part three, Hyppolite gives a captivating account of the motivations of a person who is condemned to death by his tuberculosis. And in the first pages of part 4, Dostoyevski offers a merciless description of Gania, who combines a burning ambition, a glaring lack of ability and from there on the urge to always blame others for his lack of success. Very recognizable, the analysis still holds today.
