This book accompanied by a student workbook and teacher's guide, was written to help secondary school students to explore the history, culture, and dynamics of Michigan's indigenous peoples, the American Indians. Three chapters on the Ottawa, Potawatomi, and Ojibway (or Chippewa) peoples follow an introduction on the prehistoric roots of Michigan Indians. Each chapter reflects the integration of cultural and historical information about the Indians. The chapter on the Potawatomi stresses the political activities and economic forces affecting the tribe in southwestern Michigan. It includes biographical information on 19th century Potawatomi leaders. The second chapter focuses on the subsistence patterns and indigenous environmental relations of the Ojibway, while touching on the spiritual connotations of their existence. It is a generic treatment of Ojibway life, customs, beliefs, and the subsequent federal policies affecting them. The chapter on the Ottawa provides an extended discussion of their contact with European powers and explores the Indians' responses and adaptations to changing environmental and sociopolitical circumstances. This book contains many historical photographs and a five-page bibliography. (TES)

Feature engineering is a crucial step in the machine-learning pipeline, yet this topic is rarely examined on its own. With this practical book, you'll learn techniques for extracting and transforming features—the numeric representations of raw data—into formats for machine-learning models. Each chapter guides you through a single data problem, such as how to represent text or image data. Together, these examples illustrate the main principles of feature engineering. Rather than simply teach these principles, authors Alice Zheng and Amanda Casari focus on practical application with exercises throughout the book. The closing chapter brings everything together by tackling a real-world, structured dataset with several feature-engineering techniques. Python packages including numpy, Pandas, Scikit-learn, and Matplotlib are used in code examples. You'll examine: Feature engineering for numeric data: filtering, binning, scaling, log transforms, and power transforms Natural text techniques: bag-of-words, n-grams, and phrase detection Frequency-based filtering and feature scaling for eliminating uninformative features Encoding techniques of categorical variables, including feature hashing and bin-counting Model-based feature engineering with principal component analysis The concept of model stacking, using k-means as a featurization technique Image feature extraction with manual and deep-learning techniques

### REVIEW OF RAVEN XE USER GUIDE

• I wouldn't recommend this book to an enemy. True, the information may be worthy, but the writing style and the narration were horrible. It is definitely NOT written (nor read) in a conversational manner. I'm willing to cut the narrator some slack as he was only reading what was written, however better inflection, phrasing, pauses, etc... would have greatly helped this otherwise tedious book. I couldn't even finish it. I suffered through the first 5 disks and after all that investment in time I couldn't bring myself to listen to the 6th. Its just that poorly written. I'll restate the fact that the

message -- the information -- is worth hearing, its simply written in such a tedious manner that I couldn't stand to hear it through the end. I think I'll donate it to my local library.

• This short book by Henry Hazlitt is a must read for those who are curious about capitalism but don't want to spend too much time and effort reading something more elaborate to begin with. I read it all in about six-hours. For the very impatient, I would suggest they start with the second last chapter to get the big picture, and then read it from the start for explanation, examples and detail. For further reading and study, I would recommend: 'Capitalism: A Treatise on Economics by George Reisman'
