## REVIEW OF MOLECULAR BIOLOGY PRINCIPLES AND PRACTICE 2ND EDITION PDF

- As a vivid clubber and party lover i have always been in need of a guide that will point always in the right direction : the best club, the places to be, descriptions and correct directions. Unfortunately not too many titles of this kind are on the market but this one is the best. With full listings and an ever growing database of what's good and what's bad, completed by recomendations and filled out corectly, this title is a gold mine

- The puzzle of the modern world is not that so many people are poor, but that so many are wealthy. How do democracies, with well-defined property rights and education for all com into place? In this Nobel prize winning work, North investigates some issues overlooked by most economists: the role of a society's institutions, defined as formal and informal constraints, varying from written laws to vague values (but important nevertheless) in a society. Economic theory is not able to explain the great differences in wealth between nations, argues North, and that is certainly a shame, because that would be the most interesting explanation it could possibly make. The solution is to include institutions into economic analysis. Institutions determine transaction costs. In neoclassical economic theory, transaction costs are usually assumed to be zero (for reasons of comfort). North assumes transaction costs to make up half of the economy in a modern well-organized Western society with efficient institutions. A major reason for developing countries to be poor is that transaction costs are prohibitive, obstructing the benefits of trade. North asks some extremely important questions in this book, but I was a bit disappointed that he didn't offer more answers. English not being my natural tongue, I found the book a bit hard to read. However, being very interested in the subject, I found it well worth the effort. Without a major (interest) in economics, you should probably enjoy some of the reviews instead. North's main answer to the main question, by the way, is that countries will prosper if the incentives created by their institutions motivate production, and not redistribution.
