REVIEW OF GLOBAL LITHIUM BATTERY SALES MARKET REPORT 2017

- Note, this is well-written, but by the third or fourth example, you'll have figured out the theme-- which is largely: "Don't cut down all your trees!" Basically, the whole gist of the book is centered around cultures that depleted their natural resources, and, as a result, disappeared from the face of the earth. Not as interesting a premise as Guns, Germs, and Steel, and much more pedantic. Jared Diamond is still a solid writer, but this book is too long by 50%, and the premise is too simple for the elaboration within. If you loved books like this, and you're an avid fan of the "man is bad/environment is good" genre, you'll probably still enjoy this.

- A very interesting book -- and one that, if people can get past its somewhat daunting length, contains a lot of wisdom. It's easy in this high-tech age to look back at the Maya, the inhabitants of Easter Islands, and other civilizations that have done themselves in through overpopulation and overall ecological misjudgment and say, "That can't happen to us. We'd see it coming and do something about it." In truth, though, I think civilizations all balance on a knife edge, and an ecological catastrophe can push them over that edge -- a drought, an earthquake, land that has been grazed or cultivated to exhaustion. We drive from our climate-controlled homes or offices to the grocery store where an abundance of foods unequalled in history awaits us -- and we don't realize how easily the system could fall apart. "Collapse," while overlong and a bit windy at times, is an important book. Doubtless the Maya thought their civilization was impregnable, too.
