The Practice of Emergency and Critical Care Neurology serves as the definitive authoritative reference on the care of the patient with a critical neurologic disorder at risk of deterioration and in need of immediate attention. This work is an expanded new edition of the book on the management of patients with critical neurologic disorders. This single-authored monograph is broad in scope and follows the patients from the very moment they enter the emergency department to their care in the neurosciences intensive care unit. This book condenses the essential information into several sections. These are: The General Principles of Recognition of Critically Ill Neurologic Patients in the Emergency Department, The Evaluation of Presenting Symptoms Indicating Urgency and Critical Emergency, General Principles of Management of Critically Ill Patients, Monitoring Devices and Diagnostic Tests, Complete Management of Specific Disorders in the Neurosciences Intensive Care Unit, Postoperative Neurosurgical and Neurointerventional Complications, Management of Medical Complications and End of Life Care. This accessibly written book differs from the conventional by specifically following the time course of clinical complexities as they emerge and change. It offers advice on how to diagnose and manage acute neuromuscular respiratory failure, acute worrisome headache, acute febrile confusion, acute diplopia, acute movement disorders, acute paraplegia, seizures and coma of uncertain cause in the emergency department. The major disorders requiring neurocritical care are covered in great detail and include traumatic brain injury aneurysmal subarachnoid hemorrhage, cerebral hemorrhage, hemispheric ischemic stroke, basilar artery occlusion, acute bacterial meningitis and encephalitis, myasthenic crisis and severe Guillan Barre syndrome. This book comes with a pocket book of selected tables and figures. This booklet covers all essential points for quick reference and has been considered a 'survival guide' for the house staff.

Hyperbaric oxygen treatment (HBO2) is a widely accepted adjuvant therapy in various health conditions that exhibit impaired tissue blood flow. At high pressures, the delivery of the dissolved oxygen in plasma is enhanced, which contributes to better tissue oxygenation, cellular metabolism and ultimately, healing. However, this is not the only beneficial outcome of HBO2 treatment since oxygen is a highly reactive molecule and can induce upregulation of many enzymatic systems in the cell at the cellular, genetic and molecular level. Particularly, vascular/endothelial function is affected by the HBO2. Our understanding of these mechanisms is still emerging. There have been many controversies related to the HBO2 protocols and indications. As well as exhibiting beneficiary effects on the tissue perfusion, it is known that HBO2 demonstrates high toxicity at higher pressures, due to increased oxidative stress and barotrauma. On the other hand, there is a lack of translation of the knowledge on the mechanisms of action of HBO2 obtained from the experimental research to the clinical practice. Thus, this book presents the reader with an overview of the current knowledge on the mechanisms of HBO2 effects in various experimental models and clinical treatment protocols, in an attempt to provide a better understanding of how and when HBO2 should be used as an effective therapy without unwanted side effects.

Neuroprotection is becoming an increasingly recognized and important part of critical care and perioperative medicine. As human beings survive increasingly severe life-threatening injuries and complex surgical interventions, it has become clear that neurologic injury and dysfunction is a primary driver of long-term outcome and disability. Neuroprotection is currently under-recognized as the primary objective in promoting recovery from life-threatening injuries, illnesses, and procedures. To address this knowledge gap, Neuroprotection in Critical Care and Perioperative Medicine provides a concise review of the current state of the art of clinical care and research. Within the context of critical care, the specific topics covered will include the primary forms of brain injury on which neuroprotection research and intervention has traditionally focused, such as traumatic brain injury, cardiac arrest, acute ischemic stroke, and intracranial hemorrhage, as well as CNS injuries related to sepsis and acute respiratory distress syndrome, mechanical circulatory support, and premature birth. Within the context of perioperative care, the specific topics covered will include anesthetic and perioperative strategies to reduce brain injury from cardiac surgery, aortic surgery and endovascular repair, carotid endarterectomy, vascular and endovascular neurosurgery, and other major surgical procedures.

- What This publishing venture is wonderful it brings together some of the best pieces of one of the best writers in the 20th century. I have read all of this before but as I read it now in my 86th year, it seems so new and so apropos. Like all great literature CS Lewis' seems to be timeless and so insightful it makes you appreciate that reason is great but not enough. I recommend this book to all who sincerely desire to be the best human person they can become. "It is never to late to try," said the Old Man Jack McCall
- Who is God? How do I come to know Him? Are we God's descendants? These questions are but a few of the questions that C.S. Lewis addresses in "Mere Christianity". This book contains short chapters that can be read in under 10 minutes. However, Lewis has managed to zero in on the question and explore it in such detail that no one can walk away without fully understanding the issues and his position on them. Lewis relies not on quoting scripture to illustrate the core principles of his beliefs, but rather on logic and the observation of humanity. "Mere Christianity" is highly recommended for both the Christian searching to answer questions about his faith and the non-Christian who is wondering what all the fuss is about.
