Der neue Beton-Kalender 2018 mit den Schwerpunkten Bautenschutz und Brandschutz bietet eine solide Arbeitsgrundlage und ein topaktuelles und verlässliches Nachschlagewerk für die fehlerfreie Planung dauerhafter Betonkonstruktionen. Dabei geht es um den Schutz vor Betonschäden und den Schutz der Bewehrung, um die Sicherstellung der Gebrauchstauglichkeit, sowie um die Abwehr von Gefahren für Füllgüter oder für die Umwelt. Das Buch

stellt den neuesten Stand der Technik der Oberflächenschutzsysteme für verschiedene Anforderungen dar und enthält praxisgerechte Hinweise für die Planung wirtschaftlicher Betonkonstruktionen mit minimalen Instandsetzungskosten und nachhaltig wirksamer Schutzmaßnahmen im Bestand. Eine wesentliche Innovationskraft der Betonbauweise besteht in neuen Betonen und in der immer besseren Verarbeitung und Qualitätssicherung, wie z. B. mit dem neuen System der Frischbetonverbundfolie. Diese bietet für wasserundurchlässige Betonbauwerke eine zusätzliche Sicherheit bei besonderen und schwierigen

Randbedingungen oder bei hohen Nutzungsanforderungen. Ihre Anwendung dient der Abdichtung erdberührter Bauteile, aber auch z. B. zum Verkleben von Wärmedämmung auf Außenwänden. Zusätzlich werden aktuelle Erläuterungen zur Neuausgabe der DAfStb-Richtlinie WU-Beton aus erster Hand gegeben. Ein Kapitel befasst sich auf aktuellem Stand mit der Bemessung der Schalungssysteme aufgrund von Frischbetondruck. Dabei stellen geneigte oder gekrümmte Betonbauteile hohe Anforderungen an die Schalungstechnik und die Bauausführung. Ein neues Ingenieurmodell zur Betrachtung der Standsicherheit wird vorgestellt. Zum

Schwerpunkt Brandschutz wird das Verhalten von Beton unter Brandbeanspruchung grundlegend zusammengefasst. Außerdem werden ausführliche Hintergrunderläuterungen zum konstruktiven baulichen Brandschutz gegeben. Für die "Heißbemessung" dient eine zusammenfassende Darstellung der wichtigsten bzw. gebräuchlichsten Bemessungstabellen aus DIN EN 1992-1-2 mit NA und aus DIN 4102-4/ DIN 4102-22 (Tabellenverfahren) einschließlich Beispielen dem schnellen Zugriff in der Praxis. Für die tägliche Berechnungs- und Bemessungspraxis wird die nichtlineare Berechnung von Stahlbetonbauteilen und -tragwerken mit Hilfe der FE-Methode übersichtlich aufbereitet. Dabei wird besonderes Gewicht auf praxistaugliche Hinweise für die Vorbereitung und Durchführung solcher Berechnungen gelegt. Die Digitalisierung und der damit verbundene technologische Fortschritt ermöglichen die Einführung von innovativen, digital gestützten Methoden und Werkzeugen. Vor diesem Hintergrund wird bereits seit einigen Jahren Building Information Modeling (BIM) als neue Arbeitsmethodik angewandt. Es werden die mit der Einführung und Nutzung von BIM verbundenen Themenbereiche und Prozesse bezüglich Technologie,

Einbindung in das Rechtsgefüge, Standardisierung und Zusammenarbeit übersichtlich dargestellt. Praxisbeispiele und konkrete Projekterfahrungen verdeutlichen die nutzbringende Anwendung. Untersuchungen zur Ermittlung des Ermüdungswiderstandes von Betonbauteilen unter sehr hohen Lastwechselzahlen führten zu neuen Erkenntnissen über die Schädigungsentwicklung - die Thematik wird unter Einbeziehung der Modelle und Bemessungskonzepte grundlegend behandelt. Der Beton-Kalender 2018 ist wiederum eine besondere Fundgrube für Ingenieure in Planungsbüros und in

der Bauindustrie.

Der neue Beton-Kalender 2020 mit den Schwerpunkten Wasserbau sowie Konstruktion und Bemessung bietet eine solide Arbeitsgrundlage und ein topaktuelles und verlässliches

Nachsschlagewerk für die fehlerfreie Planung von Betonkonstruktionen. Unter dem Schwerpunktthema Wasserbau behandelt der Beton-Kalender Entwurf und Konstruktion von massiven Wasserbauwerken an Wasserstraßen. Diese werden zum Beispiel zur verkehrswirtschaftlichen Nutzung (Binnenschifffahrt), zur Wasserversorgung, zur Erhaltung der Vorflut für den Abfluss der Niederschläge und Entwässerungszwecke, zur Abwendung von Hochwasser- und Eisgefährdung oder zur Energiegewinnung durch Wasserkraft genutzt. Unter dem Schwerpunktthema Konstruktion und Bemessung versammelt der Beton-Kalender eine Reihe Beiträge zum aktuellen Wissensstand für Entwurf und Bemessung im Konstruktiven Hochbau: Bei der Konstruktion und Bemessung von Stahlbetonbauteilen sind die Verankerungs- und die Bewehrungstechnik wesentliche Bestandteile. Nachdem im April 2019 endlich die europäischen Regeln in Eurocode 2 Teil 4 zur Bemessung der Verankerung von Befestigungen tragender und nichttragender Bauteile veröffentlicht wurde, werden in diesem Buch Erläuterungen zur Anwendung und Hintergrundinformationen gegeben. Die Planung von Maßnahmen zur

Baugrundverbesserung sind häufig Bestandteil der Tragwerksplanung und wesentlich für die sichere Errichtung von Bauwerken. Ein Beitrag mit vertieften Erläuterungen und Beispielen zu den zahlreichen Verfahren vermittelt die notwendigen Kenntnisse. Außerdem wird der Standardbeitrag über Beton in neubearbeiteter Fassung vorgelegt. In bewährter Weise wird die Eurocode-Kommentierung in Kurzfassungen für einfache Anwendungsfälle und die schnelle Orientierung fortgeführt: diese Ausgabe enthält die Erläuterungen zu den Einwirkungsnormen DIN EN 1991 und die kommentierte

Kurzfassung von DIN EN 1992-1 auf aktuellem Stand. Der Beton-Kalender 2020 ist wieder eine besondere Fundgrube für Ingenieure in Planungsbüros und in der Bauindustrie.

Beton unterliegt einem Wandel der Anforderungen und entwickelt selbst Innovationskraft mit Auswirkungen auf Gestaltung bis hin zur Baustellenlogistik. Die Entwicklung von hochfesten, ultrahochfesten und selbstverdichtenden Betonen, die gestiegenen Qualitätsanforderungen und die zu erwartende Knappheit natürlicher Gesteinskörnungen setzen neue Anforderungsmaßstäbe an Entwurfskonzepte. Die Anforderungen an die Dauerhaftigkeit von Beton zielen insbesondere auf eine

gute Homogenität und auf eine relativ hohe Dichte. Dieses Ziel kann nur im Zusammenwirken von Konstruktion, Statik, Herstellung, Transport, Förderung, Verarbeitung und Nachbehandlung erreicht werden. Die Anforderungen an die Wirtschaftlichkeit von Betontragwerken können durch Optimierung von Prozessen und Automatisierung in der Baulogistik erfüllt werden - der Bauablauf im Jahr 2017 unterscheidet sich erheblich von Baustellen vor 50 oder gar 100 Jahren. Immer höhere erzielbare Festigkeiten ermöglichen schlankere Bauteile. Auch die Gestaltbarkeit von Tragwerken wird vielseitiger, diese

erfordert aber gleichzeitig eine leichte Verarbeitbarkeit. Vor diesem Hintergrund enthält der Beton-Kalender 2017 eine Reihe von Beiträgen über Betonherstellung, aktuelle Produkterweiterungen sowie verschiedene Anwendungen von Spezialbetonen und deren Qualitätssicherung sowie erstmalig über die bautechnische Anwendung von tragenden Kunststoffbauteilen. Außerdem wurde der aktuelle Wissensstand über Spannbeton aufgearbeitet. In bewährter Weise werden aktuelle europäische und nationale Normen in konsolidierten Kurzfassungen fortgeführt. acero para el armado y el pretensado del hormigón :métodos de ensayo. Parte 3, Acero para pretensar John Wiley & Sons

Cable-stayed structures have become increasingly popular over the last 30 years and have been used in all parts of the world. Modern cable-stayed bridges have a history of over 50-years and have been constructed with span lengths ranging from 15 m to over 1000 m. Many long span cable-stayed bridges have been built for railway and highway traffic applications. Stay cables have also been used on pedestrian structures, many of

which are updated based on architecturally striking and have become landmark structures. There is growing use in building structures, particularly for cable-supported roofs. Most of the cable supported structures have been in the form of cable-stayed bridges; but in recent years, extradosed bridges have seen increased popularity among the designers. Led by the experience in Japan, more than 200 extradosed bridges have been constructed worldwide in the past 15 years. The first edition of these fib recommendations was published as fib Bulletin 30 in 2005 and was the first specification published by fib for stay cable systems. This new bulletin has been updated based on Bulletin 30 with the aim to reflect the current state of the art and encompass the latest knowledge in cable systems. In addition, it has been the aspiration of Commission 5 and Task Group 5.5 to harmonize the guidance in this updated bulletin with other stay cable recommendations from around the world, including those from Europe, Japan and the USA. This new bulletin is intended to supersede and replace fib Bulletin 30. It is recommended that it be used in lieu of fib Bulletin 30 for all future cable supported applications. The updated bulletin introduces several significant enhancements to the

specifications: These recommendations are applicable to both stay cable and extradosed cable applications. In the past, there has been some debate over the boundary between cable-stayed and extradosed bridges. This bulletin presents a new continuous approach valid for both. A completely new testing requirement to assess the performance of cable systems under bending fatigue, including both anchorages and saddles, if applicable, has been added. Testing requirements for saddle systems have been reformulated. In addition to the bending fatigue test noted above, new testing procedures for stay cable saddles with isolated tensile elements are introduced. This includes tests for saddle axial fatigue, friction and tensile testing, and determination of the effective saddle friction coefficient. Expanded system qualification, including requirements for both stay cable and extradosed applications. Includes new provisions for MTE qualification and additional load transferring connection devices. Minimum number of tests is specified for each. A new in-situ damping measurement test has been added to verify the actual damping ratio of the damping devices installed. By testing on site, selected cables may be excited to vibrate without and with the

damping devices so that the observed vibration behaviour can be compared to the specified value. Other revisions have been made to reflect the current state of practice: Expanded quality control testing requirements Inclusion of epoxy-coated prestressing steel as a protection layer. Previous recommendations only considered zinc coatings. Specifications for epoxy coating material are given. Requirements for stainless steel components such as pipes, caps and plates Updated guidance for designing lightning protection systems Detailed recommendations for different levels of inspection of cable systems, including:

initial, routine, detailed and exceptional inspections An updated list of references, relevant standards, and extended literature

Without doubt, active corrosion protection of prestressing steels by cement grout can be one of the most economic and durable solutions, if properly executed. Numerous other corrosion protection systems which fulfill requirements such as

controllability and exchangeability are available. This state-of-the-art report, prepared by a task group and approved by fib Commission 9 Reinforcing and prestressing materials and systems, concentrates exclusively on factory applied corrosion protection that can be produced in controlled processes which should assure a better quality than corrosion protection applied on site. The report is addressed to designers and installers (executing persons) attempting to inform them about the various possibilities for industrially applied corrosion protection and to provide the necessary knowledge for their application.

This fib Recommendation gives technical guidelines regarding design, testing, acceptance, installation, qualification, inspection and maintenance of stay cable systems using prestressing steels (strands, wires or bars) as tensile elements, which can be applied internationally. This Recommendation is applicable for cable-stayed bridges and other suspended structures such as roofs. It may also be used for hangers in arch structures and as suspension cables, as appropriate. This Recommendations has been formulated by an international working group comprising more

than 20 experts from administrative authorities, universities, laboratories, owners, structural designers, suppliers of prestressing steels and stay cable suppliers. The text has been written to cover best construction practices around the world, and to provide material specifications that are considered to be the most advanced available at the time of preparing this text. For ease of use (for client, designer and cable supplier), the complex content has been arranged thematically according to the system components into chapters focusing on performance characteristics, requirements and acceptance criteria. Requirements and

comments have been specified for all parties involved in design and construction in order to aim for a uniform and high quality and durability. The interfaces to the structural designer are highlighted. The essential subjects are: Design and detailing of stay cables including saddles and damping devices Durability requirements and corrosion protection systems Requirements for the materials Testing requirements for the stay cables Installation, tolerances, qualification of companies and personnel Inspection, maintenance and repair. This Recommendation does not cover the technology of stay cables whose tensile elements are ropes,

locked-coil cables, etc. or which consist of composite materials. Nevertheless, in many cases the specified performance criteria may also be applicable to these systems, although numerical values given for the acceptance criteria may need to be adjusted. For these systems it has been difficult to provide multiple protective layers similar to those specified for stay cables made from prestressing steel and therefore, the quality of corrosion protection may not be equivalent. While extradosed cables have similarities with stay cables, generally agreed design and system acceptance criteria are not yet available and therefore, this type of cable is not covered.

Der Eurocode 2 für den Beton-, Stahlbeton- und Spannbetonbau wurde zusammen mit anderen Eurocodes zum Stichtag 1. Juli 2012 in Deutschland bauaufsichtlich eingeführt. Der Teil DIN EN 1992-1-1: "Eurocode 2 - Bemessung und Konstruktion von Stahlbeton- und Spannbetontragwerken - Teil 1-1: Allgemeine Bemessungsregeln und Regeln für den Hochbau" mit dem dazugehörigen Nationalen Anhang löste damit die frühere nationale Norm für die Tragwerksplanung im Betonbau DIN 1045-1 ab. Die mit dieser "Kommentierten Fassung" vorgelegte Aufbereitung des

Eurocodes 2 soll den in der Praxis tätigen Tragwerksplanern vor allem die Einarbeitung in das neue europäische Regelwerk und die tägliche Arbeit damit erleichtern. Hierzu wurden in einem Normenteil der Text von DIN EN 1992-1-1 und die dazugehörigen Festlegungen im Nationalen Anhang für Deutschland zusammengeführt und zu einer konsolidierten Fassung verwoben und redaktionell überarbeitet. Alle nationalen Regeln wurden nicht nur in den Text eingearbeitet, sondern auch in Bilder, Gleichungen und Tabellen, und durch eine Unterlegung kenntlich gemacht. Überflüssige Textteile von EN 1992-1-1, wie Anmerkungen, die

durch nationale Regeln ersetzt wurden, oder Absätze und Anhänge, die in Deutschland nicht gelten, wurden entfernt. So kann sich der Leser auf den maßgebenden Normtext konzentrieren. Begleitet wird der konsolidierte Normtext in einer Hinweisspalte durch hilfreiche Verweise, Grafiken, Tabellen und kurze Erläuterungen, so dass sich der Leser schneller und einfacher zurechtfinden kann. Um die Akzeptanz der neuen aber auch der vielen bekannten Regelungen zu erhöhen, enthält der zweite Teil dieses Buches Erläuterungen, Hintergrundinformationen und Beispiele, insbesondere zu den neuen oder abweichenden Regeln von Eurocode 2 sowie zu den national festzulegenden Parametern (NDP) und den zusätzlichen nationalen Ergänzungen (NCI) aus dem Nationalen Anhang (NA). In die nunmehr vorgelegte 2. aktualisierte Auflage dieses Buches wurden die A1-Änderungen der DIN EN 1992-1-1/A1 und des Nationalen Anhangs DIN EN 1992-1-1/NA/A1 aus dem Jahr 2015 eingearbeitet. Bei dieser Gelegenheit wurden die dazugehörigen Erläuterungen ergänzt, einige aktuelle Auslegungen zur Norm und Verbesserungsvorschläge unserer Leser aufgenommen, die Literaturliste aktualisiert sowie

REVIEW OF ISO

15630 3

- I have 3 reasons to hate this book. The author's age is not one of them. Age has nothing to do with quality of work- for good stories by young authors, at least the first two Valdemar anthologies (Sword of Ice, Sun in Glory, ed. Mercedes Lackey) have good stories by a girl who is twelve or so. She is a better writer than Paolini- not stellar, but not as bad as Eragon and Eldest.1. His writing style is stilted, jerky, and has no flow. There is a flowing, musical, poetic feeling to the work of really good writers- Tolkein, Le Guin, McKillip have this. Other writers, like Lackey, create a less-poetic but real, believable world. Not

Paolini. I am really sorry to give such a negative review of a first book, but this needed more work.2. From Murtagh's story to Eragon and the prophesy (Prophesies are an excuse for laziness- they tell the characters what is going to happen. They are also truly annoying unless handled REALLY well. I figured out that Murtagh was the one who was going to betray Eragon, and I nearly got rid of the book then. (At least I had the sense to get it from the library.)3. Eragon makes way to big a deal about that scar. He is NOT crippled, and he is an irritating character. He acts like it is the end of

the world.If you want to read this book, do it, but get it from the library. If you end up thinking that my review is trash, and you like the story, then you can get the book after all. It's not like it's in short supply in either bookstores or libraries.

- As a nonfiction writer, when reading fiction, I want innovative fantasy and this book delivers just that.I have not read a book that harbors the reader as much as this one since J.K. Rowling's Harry Potter novels.If you enjoy reading books that will encase you completely with cogent characters and an efficacious story, read Eragon.
