Cooling and Heating Load Calculation Manual. Prepared by American Society of Heating, Refrigerating and Air-conditioning Engineers, ASHRAE CRC Press

Heating and cooling load calculations are carried out to estimate the required capacity of heating and cooling systems, which can maintain the required conditions in the conditioned space. To estimate the required cooling or heating capacities, one has to have information regarding the design indoor and outdoor conditions, specifications of the building, specifications of the

conditioned space (such as the occupancy, activity level, various appliances and equipment used etc.) and any special requirements of the particular application. For comfort applications, the required indoor conditions are fixed by the criterion of thermal comfort, while for industrial or commercial applications the required indoor conditions are fixed by the particular processes being performed or the products being stored. Generally, heating and cooling load calculations involve a systematic and stepwise procedure, which account for all the building energy flows. In practice, a variety of methods ranging from simple rules-of-thumb to complex transfer function methods are used to arrive at the building loads. This short quick book provides a procedure for preparing a manual calculation for cooling load using CLTD/CLF method suggested by ASHRAE and includes two detailed examples. For more advanced methods such as TFM, the reader should refer to ASHRAE and other handbooks.

Learning Objective At the end of this course, the student should be able to:

1. Understand the basic terminology and definitions related to air conditioning load calculations
2. Explain the differences between heating and cooling load design considerations
3. Explain the difference between 1) space heat gain v/s cooling load 2) space cooling v/s cooling load and 3) external loads v/s internal loads
4. Differentiate between sensible and latent loads

"This book presents the most current design procedures in heating, ventilation and air conditioning (HVAC), available in handbooks, like the ASHRAE (American Society of Heating, Refrigeration and Air Conditioning Engineers) Handbook-2013 Fundamentals, in a way that is easier for students to understand. Every effort is made to explain in detail the fundamental physical principles that form the basis of the various design procedures. A novel feature of the book is the inclusion of about 15 worked examples in each chapter, carefully chosen to highlight the diverse aspects of HVAC design. The solutions for the worked examples clarify the physical principles behind the design method. In addition, there are problems at the end of each chapter for which numerical answers are provided. The book

includes a series of MATLAB programs that may be used to solve realistic HVAC design problems, which in general, require extensive and repetitive calculations."--

REVIEW OF ASHRAE COOLING AND HEATING LOAD CALCULATION MANUAL 2ND EDITION

- Ethan Frome was a dramatic book. Ethan Frome himself was a big character of this book. It is all about love and all that stuff. It is kinda like the seven deadly sins!! I thought this was a good book. I had to read it with my 10th grade english class. Ethan is a tragic hero in this tragic and dramatic love story!
- Reverend Jen's account of her neighborhood "fun" is both educational and entertaining, not to mention, a staggering work of genius that knocks the pretentious off their high horse with its honest aesthetic of the uncool. The political puppet show combines silly humor and scathing political satire as well as pop culture references and more laughs than a barrel full of crazed monkeys. I love Reverend Jen. Although I am not Reverend Jen. I love her. Despite the fact that Reverend Jen will probably never be recognized by the established literary / art world of her time, years from now, Reverend Jen will be recognized as an artist whose vision inspired a whole new legion of art stars.
