This monograph presents in great detail a large number of both unpublished and previously published Babylonian mathematical texts in the cuneiform script. It is a continuation of the work *A Remarkable Collection of Babylonian Mathematical Texts* (Springer 2007) written by Jöran Friberg, the leading expert on Babylonian mathematics. Focussing on the big picture, Friberg explores in this book several Late Babylonian arithmetical and metro-mathematical table texts from the sites of Babylon, Uruk and Sippar, collections of mathematical exercises from four Old Babylonian sites, as

well as a new text from Early Dynastic/Early Sargonic Umma, which is the oldest known collection of mathematical exercises. A table of reciprocals from the end of the third millennium BC, differing radically from well-documented but younger tables of reciprocals from the Neo-Sumerian and Old-Babylonian periods, as well as a fragment of a Neo-Sumerian clay tablet showing a new type of a labyrinth are also discussed. The material is presented in the form of photos, hand copies, transliterations and translations, accompanied by exhaustive explanations. The previously unpublished mathematical cuneiform texts presented in this book were discovered by Farouk Al-Rawi, who also made numerous beautiful hand copies of most of the clay tablets. Historians of mathematics and the Mesopotamian civilization, linguists and those interested in ancient labyrinths will find New Mathematical Cuneiform Texts particularly valuable. The book contains many texts of previously unknown types and material that is not available elsewhere.

Mesopotamian mathematics is known from a great number of cuneiform texts, most of them Old Babylonian, some Late Babylonian or pre-Old-Babylonian, and has been intensively studied during the last couple of decades. In contrast to this Egyptian mathematics is known from only a small number of papyrus texts, and the few books and papers that have been written about Egyptian mathematical papyri have mostly reiterated the same old presentations and interpretations of the texts. In this book, it is shown that the methods developed by the author for the close study of mathematical cuneiform texts can also be successfully applied to all kinds of Egyptian mathematical texts, hieratic, demotic, or Greek-Egyptian. At the same time, comparisons of a large number of individual Egyptian mathematical exercises with Babylonian parallels yield many new insights into the nature of Egyptian mathematics and show that Egyptian and Babylonian mathematics display greater similarities than expected. Contents:Two Curious Mathematical Cuneiform Texts from Old Babylonian MariHieratic Mathematical Papyri and Cuneiform Mathematical TextsDemotic Mathematical Papyri and Cuneiform Mathematical TextsGreek-Egyptian Mathematical Documents and Cuneiform Mathematical Texts Readership: Mathematicians, historians of science, egyptologists and assyriologists. REVIEW OF AREA OF A CIRCLE WORD PROBLEMS WITH SOLUTIONS

- This book is.. boring. Real boring. It's like reading over-and-over 50 page chapters that all have the same punch line conclusion. I'll give Diamond credit for being ridiculously knowledgeable about his subject areas, anthropology, biology, geography, etc. He's so knowledgeable he can go on for 30 pages about Caribou poop in Greenland.
- I came back from Korea on April 1, 2011 with a dying dream to write a book about my experiences. I had little more than 30 pages of badly-edited journal entries that were all totally out of chronological order. Not only that, through the magic of "Copy and Paste" I had managed to intertwine up to four or five copies of the exact same stories within my journal entries. I had given up on trying to make sense of my small collections of stories and

insignificant observations until one day I started reading a book called Collapse by Jared Diamond. I so enjoyed the section of the book describing the European Vikings' first contact with the local Inuit in the "Newly-Discovered" Greenland (as well as their irrational reluctance to eat fish and their unwillingness to adapt their survival strategies in the face of a social collapse), I decided I wanted to try and delay my own social collapse and try being a "writer." Another factor that contributed to this book's completion was the fact that I was so much at odds with living in the same house as my mom's third husband, I barricaded myself into my room, leaving only four or five times a day to use the living room phone, go to the bathroom or to make myself a bowl of Cheerios. During the next four month's of my isolation from my life's problems I was forced to work on this book to avoid facing my other problems in life; my lack of job opportunities, my inability to get a girlfriend and my prolonged recovery from an expensive surgery. While completing my book (First Contact in Korea: A Native English Teacher's Guide to South Korea) I became intimately reacquainted with the frustrations of my American life (showing up six times to Chico Sports Club without being able to schedule a job interview) that contributed to my original departure for Korea a year and a half earlier. In the face of all adversity in life there are always opportunities; mainly the experience of working aboard, writing a book and receiving quality and affordable medical care from a country on the other side of the world.
