"In recent decades, the intensification of unpredictable events including the Covid-19 outbreak, Brexit, trade warfare, religion-inspired terrorism and civil wars, and climate change has resulted in serious loss of human lives and property, a decrease in biodiversity and natural hazards (with long-term negative impacts on environment), and impeded social and economic development. Economics and Engineering of Unpredictable Events: Modelling, Planning and Policies provides an integrated view of the management of unpredictable events incorporating three major perspectives: economic management, environmental planning and engineering models. Contributors from economics, planning, regional science, and engineering address key questions including; How resilient are human societies and their habitats? What should societies do to shift from being vulnerable to being more resilient? And what role should planning and policies play to protect communities and the natural environment? The chapters cover academic debates, conceptual reflections, case studies, methods, and strategy development with particular reference to mitigation and adaptation in face of unpredictable events. This book is of particular interest to readers of economic policy, urban and regional planning and engineering"--

*Economics and Development Studies* Routledge

The aim of this book, first published in 1977, is to use the tools developed by modern microeconomics to provide a framework for the analysis of policies towards the allocation of land and the control of activities using land. The principle focus of the book is the general justification for intervention in the urban land and property markets, the principles for evaluating such intervention and the proper role of the public sector within the

urban economy. It also considers in some detail the practical problems involved in putting these principles into effect.

[Planning and Economics of Cities](#) Springer

Written by authors with years of academic, regional, and city planning experience, the classic *Planning Local Economic Development* has laid the foundation for practitioners and academics working in planning and policy development for generations. With deeper coverage of sustainability and resiliency, the new Sixth Edition explores the theories of local economic development while addressing the issues and opportunities faced by cities, towns, and local entities in crafting their economic destinies within the global economy. Nancey Green Leigh and Edward J. Blakely provide a thoroughly up-to-date exploration of planning processes, analytical techniques and data, and locality, business, and human resource development, as well as advanced technology and sustainable economic development strategies.

**Economic Development and Planning in Egypt** Routledge

What rights does the state have over privately owned land? Why should some landowners be favoured over others? How can the practice of land-use planning be improved? This book addresses these essential questions and shows that the interests people have in property rights over land and buildings are not just emotional but often financial too. It follows that the law, which affects who has property rights, what those rights are and how they may be used, can have great financial consequences for people and great economic consequences for society in general. For those reasons, looking at land-use planning as it affects and is affected by property rights illuminates some core aspects of land-use planning, including the law, economics, ethics and ideology. In this book, Needham examines those aspects from the clear perspective of property rights.

*Nigeria's Planning Experience 1945-2000* SAGE Publications India

This book introduces the interlocking disciplines of property and planning to economic theory and practice. Unlike any other available textbook, *The Economics of Property and Planning* skilfully introduces the reader to the interplay between property and planning using an economic lens. As resources become scarce, there is a growing need for students to understand the principles of economics in property and planning, especially given the rapid social, environmental, technological, and political changes that are shaping places. The book begins with an outline of key economists and economic problems, then resources and scarcity, before examining macro- and microeconomic factors at play in property and planning. Furthermore, this book covers a variety of topics, including spatial and locational modelling, fiscal approaches to redistribution, regeneration and renewal, and transport and infrastructure financing. There is also a particular focus on contemporary issues such as climate change, environmental limits to economic growth, sustainability and resilience, and affordable housing. This book also introduces practical evaluation tools and appraisal, plus a look at property and planning with respect to macroeconomic objectives, policy, and new directions. With property and planning essential factors in economic thinking and doing, this book provides insight into what future places will look like in real terms and how they will be shaped by policy. Targeted disciplines for this book include Economics, Planning, Property, Construction, Geography, Environmental Management, Sustainability, Housing, Built Environment, Land Economy, Urban Studies, Regional Studies, and Public Policy.

[Economic Development in Tunisia](#) Routledge

Development studies textbooks and courses have sometimes tended to avoid significant economic content. However, without an understanding of the economic aspects of international development many of the more complex issues cannot be fully comprehended. *Economics and Development Studies* makes the economic dimension of discourse around controversial issues in international development accessible to second and third year undergraduate students working towards degrees in development studies. Following an introductory chapter outlining the connections between development economics and development studies, this book consists of eight substantive chapters dealing with the nature of development economics, economic growth and structural change, economic growth and developing countries, economic growth and economic development since 1960, the global economy and the Third World, developing countries and international trade, economics and development policy, and poverty, equality and development economists, with a tenth concluding chapter. This book synthesizes existing development economics literature in order to identify the salient issues and controversies and make them accessible and understandable. The concern is to distinguish differences within the economics profession, and between economists and non-economists, so that the reader can make informed judgments about the sources of these differences, and about their impact on policy analysis and policy advice. The book features explanatory text boxes, tables and diagrams, suggestions for further reading, and a listing of the economic concepts used in the chapters.

*Development Planning* Routledge

First published in 1978, this book was written at a time when belief was high in Western-guided economic development of the emerging countries. The success of Marshall Plan in war-torn Europe generated a US-led optimism that, with generous inflows of aid and technical assistance, the Third World could be won over in the Cold War. The author's direct experience as a young academic economist in Cyprus, Malaysia, Uganda and Liberia led him to question this general optimism: the reality on the ground in the developing world did not seem to match Western optimism. Theories and blueprints, made in the West, did not fit the requirements of developing countries. Higher production and better income distribution were inseparable twin objectives of developing nations. That meant, production of a higher national output must at the same time promote social justice. Investment must create adequate jobs so that new entrants into rapidly expanding labor force could be gainfully employed. Yet, the dominant (Western) theories of development at the time, in particular the Trickle Down Theory of Growth, prescribed "Growth First, Distribution Later" strategy. Similarly, Import Substitution Industrialization theories were emphasized at the expense of export-led growth. Dualistic Growth theories preached urban-biased, anti-rural development. This book was written as a rebuttal of such faulty theorizing and misguided professional technical assistance and the book's message is no less valid today than in the 1970's.

## REVIEW OF ECONOMICS OF DEVELOPMENT AND PLANNING ML JHINGAN

- This 1964 book is a testament to the individual's ability to imagine and build one's own home. It is a book to be inspired by. I read the book while overseas and immediately became convinced that I could build my own home. After retirement, my wife and I did just that, with great success. Do not buy this book thinking that it will provide explicit directions. The engineering is old and often outdated. Read it rather as an evocative tribute to human ingenuity and ability. This should not be your last book on building design, but it might very well be your best first book.

- I am a consistent nonfiction book reader - as long as I can remember. But I have a hard time with this book & lost interest. I followed the classic thru to the end, but it is not a book that I would recommend to another.
