REVIEW OF TREES TEACHER RESOURCE BBC

- I was forced to read this book for an English

assignment in ninth grade. It took me forever to read because it didn't show any point to me. The characters were very confusing and hard to keep up with. I never really got into the book because it was so boring. I basically read the words on the page and didn't take anything in because I couldn't. Please don't waste your time on this book. Read something from Michael Crichton instead.

- A more than 8 pounds book will not make you an expert in energy efficiency. It is

especially true from an Chinese perspective. It is more or less for facility operators, and everyone knows without top management commitment, nothing will happen, regardless of how many measures you know and are applicable for your facility. You can find all of them in DOE Best Practices, and you won't have to carry this huge manual. Buy Handbook of Energy Engineering, or Plant Engineer's and Manager's Guide to Energy Conservation, they are better.
