REVIEW OF SEISMIC AND WIND FORCES STRUCTURAL DESIGN EXAMPLES 4TH

- This is the best book for learning I have ever read.You read this book and you can tell if somebody is not telling the truth to you. After reading this book it was hard to watch TV.The commercials are the worst. Read it and see .It was a require reading for my 5 children.If you read it you would want your family to read it.
- I cannot compare this work to other translations of the Koran because it is the only one I have read. Nor, can I compare it to the original Arabic rendering. However, my thoughts are that the Koran is a [borrowing] of another people's god. The Koran states that the Holy Scriptures were given to the Jews and later the Christians, but that these people were not following the message or word of God correctly. What I see here is a political motive. Hebrew writings were around well before

Muhammad and the New Testament writings were available some 500 years before the Koran was written. So, it comes as no surprise that these scriptures could have found their way into Arabia. Muhammad and others simply adopted these writings as their own with changes to reflect the Arab culture at that time. Most likely, due to the fact the pagan religions of the Arabs at that time were not as complex or documented. It can also be said that Christianity also hijacked the Jewish faith, but in this case it was different. The early Christians were a Jewish sect. The Romans regarded Christianity as a Jewish sect. The two religions were not formally separated by the Romans until Constantine made Christianity the state religion. Judaism, at the time of Christ, comprised of three main sects...the Pharisees, the Sadducees and the Essenes. So, it is not surprising that Christianity would naturally form a splinter group. Many believe that Jesus and his followers were Essenes. It could also be they were a group totally separate from the three main sects, but did share beliefs and ideals with them. I believe all of these sects, especially Christianity, drew heavily from the Pharonic religions of ancient Egypt. Especially, when considering Gnostic Christianity but also the accepted Christianity of today. The Koran and Islam are a different matter. The Koran

does not delve into the real source of these faiths, but rather draws from Judaism and Christianity. Basically, intended to supercede both while finding flaws with these two faiths, or how they were being upheld. If Muslims read the Nag Hammadi Library, I think they would see where some of the ideas and beliefs of the Koran were derived. Those who know Christianity well, would know that there could not be another prophet after Jesus Christ. One is not needed. Those that are familiar with the Gnostics would know the meaning behind "another" dying on the cross while Jesus looked on. The so-called "twin" who took the place of Christ. Well, the twin simply means the body, which is the twin to the soul. Jesus had what we now call an "out-of-the-body" experience. His body died on the cross, but his soul lived on. In the case of Jesus, his soul was part of the Trinity that makes up the Oneness of God. In summation, the Koran was written by men for political purposes. This was not an uncommon act. The ability to have your god supercede the god of another people was important in those times. It is not possible to pull off such a stunt in today's world because people would write Muhammad off as a nut. The Koran brings us nothing new and nothing that wasn't written well before 600AD. With the exception of cultural items and customs of the Arabs in those days that were blended in.
