This report updates previous studies that measured in economic terms the extent of biological

losses attributable to overfishing globally. The new estimates assess these 'sunken billions' at \$83 billion annually. The report further shows that a clear path can lead to the recovery of these considerable losses, including through significant reduction in global fishing overcapacity. A breakdown between regions is also included, showing that the effort needed to achieve this reform will not be felt equally throughout the world. While the cost of such reform will likely be high, the expected benefits include an increase in biomass by a factor of 2.7, increase in annual harvests by 13 percent, and a 30-fold increase in annual net benefits accrued to the fisheries sector (from \$3 billion to \$86 billion annually). This urgent call for action is reinforced by the impacts of climate change on fish stocks and fisheries worldwide.

Regional Efforts to Implement the 1995 United Nations Fish Stocks Agreement : an Overview for the May 2006 Review Conference MIT Press

Following from *Fish for Life - Interactive Governance for Fisheries* (Kooiman et al., 2005), which presents an interdisciplinary and intersectoral approach to the governance of capture and

aquaculture fisheries, this volume pursues what interactive governance theory and the governability perspective contribute to the resolution of key fisheries problems, these include overfishing, unemployment and poverty, food insecurity, and social injustice. Since these problems are varied and can be felt among governments, resource users and communities globally, the diagnosis must be holistic, and take account of principles, institutions, and operational conditions. The authors argue that 'wicked problems' and institutional limitations are inherent to each setting, and must be included in the analysis. The volume thereby offers a new lens and a systematic approach for analysing the nature of problems and challenges concerning the governance of fisheries, explores where these problems are situated, and how potential solutions may be found. "It now seems clear that the crisis in the world's fisheries [is] a much larger and more complex problem than many had imagined. Yet, examining it through the lens of governability may offer the best hope for alleviating it--as well as alleviating similar crises in other social systems." James R. McGoodwin (Professor Emeritus, University of Colorado)

Reducing Fishing Capacity to Promote Sustainability Eburon Uitgeverij B.V.

New management programs are suggested, to improve the state of the world's fisheries.

FAO Fisheries and Aquaculture Technical Paper No. 644 Edward Elgar Publishing

This document includes eight studies showcasing good practices in support of sustainable small-scale fisheries. FAO commissioned these studies with a view to share experiences and promote the implementation of the Voluntary Guidelines for Securing Sustainable Small-Scale Fisheries in the Context of Food Security and Poverty Eradication (SSF Guidelines). The carrying out of the case studies also intended to promote participatory approaches - in line with the SSF Guidelines principles - and promote increased interaction between research and fishing communities, including the use of traditional knowledge and participatory research. It is hoped that the case studies will inform policy and policy processes and, in this way, promote sustainable small-scale fisheries according to the SSF Guidelines and the human rights based approach to development (HRBA).

Fish Food & Agriculture Org.

Drawing on more than 30 case studies from around the world, this book offers a multitude of examples for improving the governance of small-scale fisheries. Contributors from some 36 countries argue that reform, transformation and innovation are vital to achieving sustainable small-scale fisheries - especially for mitigating the threats and vulnerabilities of global change. For this to happen, governing systems must be context-specific and the governability of small-scale fisheries properly assessed. The volume corresponds well with the Voluntary Guidelines for Securing Sustainable Small-Scale Fisheries adopted in 2014, spearheaded by the United Nations Food and Agriculture Organization (FAO). These affirm the importance of small-scale fisheries for food security, nutrition, livelihoods, rural development and poverty reduction. The book arises from the project Too Big To Ignore: Global Partnership for Small-Scale Fisheries Research (TBTI). "A nuanced, diverse, vibrant and local-specific collection of essays - just as the small-scale fisheries around the world - dealt with by this versatile array of authors. Following on the heels of the recently adopted FAO Small-Scale Fisheries Guidelines, here is an erudite compendium which I heartily recommend to

policy makers, academics and activists who wish to come to terms with the complex issue of governance of this important field of human activity." John Kurien - Founding Member of the International Collective in Support of Fishworkers (ICSF), and Former Professor, Centre for Development Studies, Trivandrum, India "Likely to become a classic in its field, this book is about small-scale fisheries and interactive governance - governance which is negotiated, deliberated upon, and communicated among stakeholders who often share governing responsibilities. The authors show that interactive governance is not just a normative theory but a phenomenon that can be studied empirically, here with 34 case studies from as many countries around the world, north and south, east and west. Such "force of example" enables the editors to put together well-developed arguments and sometimes surprising conclusions about the way ahead. A must-read for managers, practitioners, stakeholders, and students!" Fikret Berkes - University of Manitoba, Canada, and author of *Coasts for People*

Rebuilding of marine fisheries Springer

To date, research on the economic implications of climate change on fisheries has been both limited and fragmented. The contributors to this volume remedy the lack of attention by investigating the economic consequences of pelagic fish fluctuations in the recent past in order to understand how to adapt and respond to future climate changes.

The State of World Fisheries and Aquaculture, 2000 OECD Publishing

Although the United States and other affluent nations have more than an adequate food supply, other nations daily face the specter of starvation. The world now has a critical population/food dilemma of potentially major proportions. Production from the sea and the land is not keeping pace

with a world population that is doubling every thirty-five years. Unless this age-old Malthusian problem is solved, millions face starvation and ultimately death. The situation has stimulated substantial international interest in the sea as a source of food and raw materials. The potential of the sea - not as a panacea, but as an important source of protein to augment the world's food supplies and thereby as a means of mitigating the crises we face - is a continuing theme throughout this book. At present, fish provide approximately 9 percent of the world's protein. Fish are sought not only for food but also for recreation and pleasure. What forces determine the present supply and demand for fishery products? More important, what steps are needed to utilize the full potential of the sea as a source of food and recreation? This book explores these forces and thus provides an insight into food potential from the sea.

REVIEW OF THE WORLDWIDE CRISIS IN FISHERIES ECONOMIC MODELS AND HUMAN BEHAVIOR

- The information was presented in simple language for the non-statistician. It was helpful to consider how statistics are presented and how they can be interpreted. The examples were outdated.
- One of the ten best adventure / mountaineering books I have ever read. Hodgson takes Kocour's adventure and guides the reader on a compelling, frightening, frequently shocking, sometimes inspiring climb up one of the world's most difficult climbs. Brilliant! I will be very surprised if this book does not become a best seller.
