The things you need to do to set up a new software project can be daunting. First, you have to select the back-end framework to create your API, choose your database, set up security, and choose your build tool. Then you have to choose the tools to create your front end: select a UI framework, configure a build tool, set up Sass processing, configure your browser to auto-refresh when you make changes, and configure the client and server so they work in unison. If you're building a new application using Spring Boot and Angular, you can save days by using JHipster. JHipster generates a complete and modern web app, unifying: - A high-performance and robust Java stack on the server side with Spring Boot - A sleek, modern, mobile-first front-end with Angular and Bootstrap - A robust microservice architecture with the JHipster Registry, Netflix OSS, the ELK stack, and Docker - A powerful workflow to build your application with Yeoman, Webpack, and Maven/Gradle

## REVIEW OF SPRING MVC A TUTORIAL SECOND EDITION

- i think this bokk is the most informative book on american staffordshire terriers that i have read to date.Alot of good photos of amstaffs .well worth purchasing.2 thumbs up
- This is the best book in the series, in my opinion. It is interesting, spellbounding, and crammed-packed with detail. The author has a great knowledge of prehistoric man and this book starts a great series that details the coming of Man into America. I read this right after I read the Earth's Children Series by Jean Auel. Read that series after this one, you will love them both. Before I read these books, I had no interest in prehistoric man, but now I plan to read all books on this topic. Maybe it will happen to you too!
