In general, our company believe that E Manage Manual Download deserves a read, despite some small imperfections. The distinct storytelling style, relatable characters, and story twists make it a beneficial addition to your bookshelf. So, if you're searching for a fascinating read, E Manage Manual Download is absolutely worth thinking about.

## REVIEW OF E MANAGE MANUAL DOWNLOAD

- Collapse - 4-1/2 stars. Excellent but not as fine as "Guns, Germs, and Steel." I find the 1-star reviews of this book very interesting. They basically just say, Diamond is full of s\*\*t, Diamond is a light-weight, Diamond is racist, Diamond is politically correct, Diamond piles it higher and deeper, Diamond knows nothing about what he is writing about. I'd take their reviews more seriously if they could actually argue with Diamond's proposition. If they could provide an alternate conclusion. I can just see it: "Carelessly consuming your resources and destroying your environment will lead to a long-lived, stable, and prosperous society." Yeah, that's it! Please have a look at the data: 1. World population change. Please see these data (ah, yes, Amazon won't let me include a link. Please go to Google and search on "world population statistics" click on the second link which is the US Census Bureau, World Population 1950 to 2050; but it actually goes way back.) It has multiple estimates of world population though time. Put these data into your spreadsheet. Plot the data. Look carefully at the curve - it's the plot of an explosion. I guarantee you that something will cut off that curve. I don't know exactly how or when; but it will

happen. (war?, pandemic?, famine?, a combination? It won't be pretty.) 2. Change in petroleum reserves 3. Change in fossil fuels consumption 4. Change in arable land area 5. Change in forest area (globally, not just in the northeastern US) 6. Change in ocean temperatures 7. Change in CO2 concentration in the atmosphere Project these trends forward. Does this look sustainable to you? The critics of Diamond would like you to believe that we can continue business as usual, consuming energy, exterminating species, eroding arable land, clearing forests, growing our population, forever. Does this make any sense to you? There are good reasons for this: greed and laziness. They make a lot of money off the current system and change hurts. Just keep driving that lumbering SUV. Keep watching TV and playing video games. Go shopping! It'll all be just fine, forever, no effort is needed from us ... Tax breaks to the wealthy and eliminating the Clean Air Act and the Clean Water Act will fix all these trends. If you want your kids and grandkids to have decent lives, I recommend change. I do not recommend whistling past the graveyard. You can think, "but it won't happen during my lifetime." Maybe. It's the same attitude that approves of deficit spending for tax breaks for the extremely wealthy. A little short-sighted, maybe? We have had a 100-year vacation from reality by burning petroleum. The petroleum isn't going to last beyond a couple more generations. And converting all that bound-up carbon into gaseous CO2 is going to have dramatic and unpredictable results. Great book, great argument, great author. Read it! It's not perfect, of course. It's not perfectly predictive. But Diamond presents a strong case and the data are on his side. You don't need ancient data, just look at current trends.

- The depth and breadth of Diamond's "Collapse" is awe inspiring. He manages to cover modern Montana, Easter Island, Mayan Civilization, the Netherlands, ancient Vikings, Modern China, and a host of other societies. He discusses the impact of man's actions on the environment, and the impact of the resultant environmental degradation on human societies. At the same time as he discusses the findings of archaeologists and historians, he analyzes the scientific factors, and evaluates the various levels of political response. He believes strongly that people can choose how to respond to environmental degradation, and death or survival results from those choices. The last chapter brings together all the identified causes of societal collapse and argues that we can make a difference, but we must rise to the challenge. And, he makes clear how globalization prevents us from being able to see societies in isolation. This book is a dense read, and it is packed with details about each of the societies discussed. The last two chapters are more of a political tract. I did not find every chapter to be equally enthralling. And, I'm certain that the attempt to fit the information into the thesis probably leaves a lot for experts in the history of each of the covered societies to argue with. Any book that attempts to weave together such a range of subject matter is going to be rife with overgeneralization. Nonetheless, this book is immensely thought provoking. For me, this book did not read as compellingly as "Guns, Germs and Steel." Nonetheless, it is a remarkable book. Highly recommended.
