The Pocket Book is for use by doctors nurses and other health workers who are responsible for the care of young children at the first level referral hospitals. This second edition is based on evidence from several WHO updated and published clinical guidelines. It is for use in both inpatient and outpatient care in small hospitals with basic laboratory facilities and essential medicines. In

some settings these guidelines can be used in any facilities where sick children are admitted for inpatient care. The Pocket Book is one of a series of documents and tools that support the Integrated Management.

Manual of Childhood Infection OUP Oxford

"Hypoxaemia is a major contributor to child deaths that occur worldwide each year; for a child with pneumonia hypoxaemia increases the risk of death by up to 5 times. Despite its importance in virtually all types of acute severe illness, hypoxaemia is often not well recognized or well managed more so in settings where resources are limited. Oxygen therapy remains an inaccessible luxury for a large proportion of severely ill children admitted to hospitals in developing countries. This is particularly true for patients in small district hospitals, where, even if some facility for delivering oxygen is available, supplies are often unreliable and the benefits of treatment may be diminished by poorly maintained, inappropriate equipment or poorly trained staff with inadequate guidelines. Increasing awareness of these problems is likely to have considerable clinical and public health benefits in the care of severely ill children. Health workers should be able to know the clinical signs that suggest the presence of hypoxaemia and have more reliable means of detection of hypoxaemia. This be achieved through more widespread use of pulse oximetry, which is a non-invasive measure of arterial oxygen saturation. At the same time oxygen therapy must be more widely available; in many remote settings, this can be achieved by use of oxygen concentrators, which can run on regular or alternative sources of power.

Having effective systems for the detection and management of hypoxaemia are vital in reducing mortality from pneumonia and other severe acute illnesses. Oxygen therapy is essential to counter hypoxaemia and many a times is the difference between life and death. This manual focuses on the availability and clinical use of oxygen therapy in children in health facilities by providing the practical aspects for health workers, biomedical engineers, and administrators. It addresses the need for appropriate detection of hypoxaemia, use of pulse oximetry, clinical use of oxygen and delivery systems and monitoring of patients on oxygen therapy. In addition, the manual addresses practical use of pulse oximetry, and oxygen concentrators and cylinders in an effort to improve oxygen systems worldwide."--Publisher's description

## **REVIEW OF MANUAL OF CHILDHOOD INFECTION THE BLUE BOOK OXFORD SPECIALIST HANDBOOKS IN**

## PAEDIATRICS

- This disturbing classic by Ray Bradbury (born 1920) grabs the reader with its chilling tone. Guy Montag is a fireman in a society where fire fighters don't extinguish flames but set fire to books because books are considered a threat by the powers that be. After meeting a free-thinking neighbor and seeing his sick wife mistreated, Montag begins to question his values and the values of a society that burns books. In time he becomes a rebel, flees from the authorities, and meets a group of vagabonds that memorize the books and then burn them (to destroy the evidence). Finally war breaks out, and despite much destruction there is hope that a new society will be rebuilt from the ashes. Bradbury hits a number of themes in this compelling novel, penned in 1951. Censorship is one, but so is a sense of increasing automation, the dumbing down of society, disdain for independent thinking, and probably McCarthyism. The dialog is snappy with many slang expressions that perhaps were more relevant in 1951 than today. The result, of course, is a somewhat eerie but gripping classic. Readers might also enjoy *THE PEDESTRIAN* and *THE FLYING MACHINE*, two Bradbury short stories that present similar themes.

- Striking, scary, almost here. Yes, I think most people who love books, value

free thought and expression, and worry about our personal freedoms being taken away one by one (which they are, folks) can identify with this story. Guy Montag wakes up one day to realize that all the material possessions of his life, indeed, his whole way of life is empty and meaningless. In Montag's world, the powers that be want everyone to be lulled into a state of false security. No one is allowed to stir the pot (remind anyone of the recent political conventions where anyone who protested anything was beaten and arrested?). Yes, anyone who can't see the symbolism so blatantly laid out before them is probably on a school board somewhere and wants to ban this book anyway. I read this book when I was about 12 years old, and I understood the implications at that young age. I think I read *To Kill a Mockingbird* the same year. When I moved to California in 1984, One of the North County School boards had banned *To Kill a Mockingbird* and it was quite a fight that took place. I re-read this book at that time, and every few years since. It's message is timeless, and if anyone has seen the advertisements for the Flat TVs that you hang on a wall, you may get a bit frightened by Bradbury's vision of the future. Fahrenheit 451 is the temperature at which books burn, by the way. This should be standard reading for everyone.
