The trucking business in India deserves special attention. It is estimated that about 8 million goods vehicles ply on

Indian roads, out of which about 25 per cent are heavy commercial vehicles (with a load capacity of 7.5 tonnes and above). More than 75 per cent of the trucks are owned by fleet operators with a fleet size of five or less. Fleet operators are mostly family-run businesses and hence they evolve with the ideologies and business principles of the family. Such evolution has led to varying business practices and levels of technology adoption. Decisions were not taken in line with modern business practices. Another trend was the relative reluctance of the next generation of these families to join their family business due to the perception that the trucking business was less appealing vis-à-vis the other options that they had after higher education. To fill this widening business-practice gap and in an attempt to impart a professional approach towards enabling the trucking business to grow, the Mahindra Truck and Bus Division (MTBD) partnered with the Indian Institute of Management (IIM) Ahmedabad to impart management education to the next generation transporters in trucking business. This youth transport Management Development Program (MDP) was called MPOWER, signifying youth transporter empowerment. Typically, a second-generation transport entrepreneur (son and daughter of a transporter/truck fleet owner) in the age group 21 to 40 years was targeted to be a participant for the MDP. Most of the participants were well educated (many of them had obtained degrees from foreign universities), ambitious and progressive, keen to be the change agents in the road transport ecosystem, innovative, and technology savvy. They shared a common vision, which was to professionalize their family business and take it to the next level. In

this book, we include teaching cases based on real-life transport business situations that highlight some of the above-mentioned issues. Through these cases, the reader would be able to appreciate the decisions in the transport business, the challenges that are faced, and use appropriate decision tools to develop solutions. We include a collection of two chapters and 12 cases. The first chapter discusses the significance and structure of the trucking business. The second chapter highlights the HR practices in the trucking business particularly related to driver management. The 12 cases have been developed with close cooperation from several transport companies such as Agarwal Packers and Movers Limited, Navigators Logistics Company Private Limited, Shreeji Transport Services Private Limited, KM Trans Logistics, and Instant Transport Solution Private Limited. There are other companies whose names have been disguised to protect their identity. Apart from the new cases, we have consciously decided to include a few cases of earlier vintage, since the issues raised and the analytical approach adopted continue to be valid.

The enterprise data center has evolved dramatically in recent years. It has moved from a model that placed multiple data centers closer to users to a more centralized dynamic model. The factors influencing this evolution are varied but can mostly be attributed to regulatory, service level improvement, cost savings, and manageability. Multiple legal issues regarding the

security of data housed in the data center have placed security requirements at the forefront of data center architecture. As the cost to operate data centers has increased, architectures have moved towards consolidation of servers and applications in order to better utilize assets and reduce "server sprawl." The more diverse and distributed the data center environment becomes, the more manageability becomes an issue. These factors have led to a trend of data center consolidation and resources on demand using technologies such as virtualization, higher WAN bandwidth technologies, and newer management technologies. The intended audience of this book is network architects and network administrators. In this IBM® Redbooks® publication we discuss the following topics: The current state of the data center network The business drivers making the case for change The unique capabilities and network requirements of system platforms The impact of server and storage consolidation on the data center network The functional overview of the main data center network virtualization and consolidation technologies The new data center network design landscape

## REVIEW OF NOKIA 3230 REPAIR GUIDE

- Ugh. all these adults. this is a KIDS BOOK, people. and sure, the beginning's a little weak, but the plot becomes terrific and exciting and epic and great and you get my point. what all you adults who think you're the only people who read this book \*choughchough\*, are saying is that this is a ripoff, but it's NOT. please. just read it. PLEASE!P.S. Eldest is so goooooood!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
- i agree with the other reviewer who didn't like the female characters. sorry, but i want more out of life thn to be beautiful and be rescued. this book is lame, and most of it is a rip-off anyway from other authors. some reviewers say i should like it because i'm a teenager but i don't.
