*Twenty Years of Education Transformation in Gauteng 1994 to 2014* Cambridge Scholars Publishing

The low demonstrable effect of education research done in South Africa in particular – and Africa in general – continues to be a problem in scientific records in the educational sciences. This scholarly collected work addresses this obstacle and focuses on recommendations from scholars in different sectorial categories in the field of education. Scholars from a variety of sub-fields within the educational sciences reflect on this particular matter, revisiting the history of research and research outcomes and offering informed recommendations based on in-depth investigation and analysis of aspects of the various discourses within the relevant sub-fields. The scope of the content of this collected work centres on the issue of the lack of scientific records concerning the scientific raising of the impact of education research. The book aims at making a specific contribution to the educational sciences by stimulating scholarly discussion around how to increase the recording of the significance of educational research done in Africa, and in South Africa in particular, and to redirect the research agenda into the direction of making more impact. Impact is conceptualised to mean both scholarly impact (that is being cited and being used as foundation for theory building and for further research) and practical impact (that is improvement of practice, teaching and learning in education institutions at all levels).

The Early Grade Reading Assessment (EGRA) measures students' progress towards reading. EGRA gauges early literacy skills through a 15-minute individual oral assessment of five fundamental

reading skills. RTI worked with education experts to develop the EGRA in 2006, and it has been piloted and implemented in more than 40 countries. This volume aims to take stock of the substantial amount of information and experience generated through the use of EGRA, and to share this knowledge with practitioners, policymakers, and international donors. Chapters cover not only particular applications of the instrument but also put EGRA in the context of broader issues and developments in literacy and education.

A groundbreaking integrated approach to reading assessment that addresses each child's unique Learning Profile Fifteen to twenty percent of our nation's children have reading difficulties. Educational evaluators must be able to use progress monitoring and diagnostic tools effectively to identify students who may be at risk, evaluate the effectiveness of school-wide reading programs, and suggest interventions that will improve reading skills. Written from a strengths-based perspective, *Reading Assessment: Linking Language, Literacy, and Cognition* is the first book of its kind to present a research-based, integrated review of reading, cognition, and oral language testing and assessment. Author Melissa Lee Farrall explores the theoretical underpinnings of reading, language, and literacy, explains the background of debates surrounding these topics, and provides detailed information and administration tips on the wide range of reading inventories and standardized tests that may be used in a reading psychoeducational assessment. With a focus on how to craft professional evaluation reports that illuminate a student's strengths—not just weaknesses—*Reading Assessment* enables school psychologists and diagnosticians, reading specialists, and special education professionals to conduct evaluations and develop effective interdisciplinary remedial recommendations and interventions. Clear, engaging, and inviting, *Reading Assessment* features: Case examples and practice exercises Chapter-opening reviews of each theory

Strengths, weaknesses, and potential problems of tests and their interpretations Chapter-ending review questions that foster skill development and critical thinking Comprehensive information on more than 50 different assessment tests Reading Assessment is an invaluable resource that helps professionals gain the knowledge and skills to confidently interpret test results and prepare detailed and effective evaluation reports designed to meet each child's unique needs as a learner.

*Why South African Schoolchildren Underachieve in Reading and Mathematics* UCT Press / Juta and Company (Pty) Ltd

This volume brings together studies of instructional writing practices and the products of those practices from diverse Indigenous languages and cultures. By analyzing a rich diversity of contexts—Finland, Ghana, Hawaii, Mexico, Papua New Guinea, and more—through biliteracy, complexity, and genre theories, this book explores and demonstrates critical components of writing pedagogy and development. Because the volume focuses on Indigenous languages, it questions center-margin perspectives on schooling and national language ideologies, which often limit the number of Indigenous languages taught, the domains of study, and the age groups included.

This volume emerges from a partnership between the American Federation of Teachers and the Learning Research and Development Center at the University of Pittsburgh. The partnership brought together researchers and expert teachers for intensive dialogue sessions focusing on what each community knows about effective mathematical learning and instruction. The chapters deal with the research on, and conceptual analysis of, specific arithmetic topics (addition, subtraction, multiplication, division, decimals, and fractions) or with overarching themes that pervade the early curriculum and constitute the links with the more advanced topics of mathematics (intuition, number sense, and estimation). Serving as a link between the communities of cognitive researchers and mathematics educators, the book capitalizes on the recent research successes of cognitive science and reviews the literature of the math education community as well.

Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice. Focussing its discussion within the context of mathematics education, it argues that while research-generated insights can have beneficial effects on learning and teaching, the question of how these effects are to be generated and sustained is far from evident. The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice. In the first part of the book, four teams of researchers use different methodologies while analysing the same corpus of data, collected in a South African mathematics classroom. In the second part, each of these teams makes a specific proposal about what can be done and how so that its research-generated insights have a tangible, beneficial impact on what is happening in mathematical classrooms. Combining two discourses – that of researchers speaking to one another, and that of researchers communicating their insights to those responsible for educational practice – the book deals with the perenial question of communication between those who study educational processes and those who are directly responsible for teacher education, educational research and classroom practices. This book will be key reading for postgraduates, researchers and academics in education and particularly in the areas of mathematics education, education research, teacher education and classroom practice. It will also appeal to teacher educators, practitioners and undergraduate students interested in educational research.

Education is a hot topic. From the stage of presidential debates to tonight's dinner table, it is an issue that most Americans are deeply concerned about. While there are many strategies for improving the educational process, we need a way to find out what works and what doesn't work as well. Educational assessment seeks to determine just how well students are learning and is an integral part of our quest for improved education. The nation is pinning greater expectations on educational assessment than ever before. We look to these assessment tools when documenting whether students and institutions are truly meeting education goals. But we must stop and ask a

crucial question: What kind of assessment is most effective? At a time when traditional testing is subject to increasing criticism, research suggests that new, exciting approaches to assessment may be on the horizon. Advances in the sciences of how people learn and how to measure such learning offer the hope of developing new kinds of assessments—assessments that help students succeed in school by making as clear as possible the nature of their accomplishments and the progress of their learning. *Knowing What Students Know* essentially explains how expanding knowledge in the scientific fields of human learning and educational measurement can form the foundations of an improved approach to assessment. These advances suggest ways that the targets of assessment—what students know and how well they know it—as well as the methods used to make inferences about student learning can be made more valid and instructionally useful. Principles for designing and using these new kinds of assessments are presented, and examples are used to illustrate the principles. Implications for policy, practice, and research are also explored. With the promise of a productive research-based approach to assessment of student learning, *Knowing What Students Know* will be important to education administrators, assessment designers, teachers and teacher educators, and education advocates.

*Education for All 2000-2015: Achievements and challenges* UNESCO Publishing

How do we articulate the possibilities, limitations and challenges of inclusive schooling and education in African contexts? This book insists that inclusive education cannot be taken for granted. Inclusion is neither a natural nor a given educational practice. It must be struggled for. Bringing a critical perspective to inclusive schooling and education is imperative. This book adds to current educational debates with an African lens. It engages inclusive education from multiple lenses of curriculum content, classroom pedagogy and instruction, representation, culture, environment and the socio-organization life of schools, the pursuit of equity and social justice and the search for educational relevance. It is opined that Africa cannot be left behind in rethinking educational inclusion in ways that evoke critical questions of power, equity and social difference. The question of learner's identity in terms of class, gender, sexuality, (dis)ability, language, ethnicity and race are equally consequential for African schooling and education. When inclusion is understood as wholeness of education, then how schooling and education engage the complete learner – her/his body, mind, soul and spirit, as well as the use of local community and Indigenous knowledges in teaching and learning become relevant. Inclusion stands the risk of liberal educational agendas that simply tinker or toy with schooling and education and hardly embrace the challenge of educational change. What we need is a fundamental structural change that ensures schooling and education embraces difference while grappling with the teaching of Indigeneity, decolonization and resistance.

Climate change poses many challenges that affect society and the natural world. With these challenges, however, come opportunities to respond. By taking steps to adapt to and mitigate climate change, the risks to society and the impacts of continued climate change can be lessened. The National Climate Assessment, coordinated by the U.S. Global Change Research Program, is a

mandated report intended to inform response decisions. Required to be developed every four years, these reports provide the most comprehensive and up-to-date evaluation of climate change impacts available for the United States, making them a unique and important climate change document. The draft Fourth National Climate Assessment (NCA4) report reviewed here addresses a wide range of topics of high importance to the United States and society more broadly, extending from human health and community well-being, to the built environment, to businesses and economies, to ecosystems and natural resources. This report evaluates the draft NCA4 to determine if it meets the requirements of the federal mandate, whether it provides accurate information grounded in the scientific literature, and whether it effectively communicates climate science, impacts, and responses for general audiences including the public, decision makers, and other stakeholders.

The research reported in *Caught in the Act* draws together the insights gained from a continuous professional development initiative for high school mathematics teachers, teaching in low socio-economic status and socially challenged environments in South Africa. The chapters show the possibilities for enhancing achievement in school mathematics if a strength-based approach is adopted to develop teaching with teachers and when their concerns are taken seriously. The book demonstrates that the ecological relevance – fitness for the context in which teachers are teaching – of the “goods” developed and distributed by initiatives should be a major consideration to offer hope for sustainable implementation to improve school mathematics education. The book is of interest to mathematics teachers, school leaders, mathematics curriculum advisors, policy makers and researchers.

- If you work with DNS/BIND for a living, you either already have this book, or know someone you can borrow it from. It's the one to own.
- I took lessons as a child but had been away from the piano for over 20 years. This book gave me just what I needed to jump-start my piano playing again. It is written with a sense of humor that kept my interest--UNLIKE most books of this type which are written by musicians who take themselves far too seriously.
