Exact algorithms for dealing with geometric objects are complicated, hard to implement in practice, and slow. Over the last 20 years a theory of geometric approximation algorithms has emerged. These algorithms tend to be simple, fast, and more robust than their exact counterparts. This book is the first to cover geometric approximation algorithms in detail. In addition, more traditional computational geometry techniques that are widely used in developing such

algorithms, like sampling, linear programming, etc., are also surveyed. Other topics covered include approximate nearest-neighbor search, shape approximation, coresets, dimension reduction, and embeddings. The topics covered are relatively independent and are supplemented by exercises. Close to 200 color figures are included in the text to illustrate proofs and ideas.

Achievements and progress in genome mapping and the genomics of microbes supersede by far those for higher plants and animals, in part due to their enormous economic implication but also smaller genome size. In the post-genomic era, whole genome sequences of animal-associated microbes

are providing clues to depicting the genetic basis of the complex host-pathogen relationships and the evolution of parasitism; and to improving methods of controlling pathogens. This volume focuses on a globally important group of intracellular prokaryotic pathogens which affect livestock animals. These include *Brucella*, *Mycobacterium*, *Anaplasma* and *Ehrlichia*, as well as the protozoan pathogens *Cryptosporidium* and *Theileria*, for which genome sequence data is available. Insights from comparative genomics of the microbes described provide clues to the adaptation involved in host-microbe interactions, as well as resources potentially

useful for application in future research and product development.

A great impetus to study differential inclusions came from the development of Control Theory, i.e. of dynamical systems  $x'(t) = f(t, x(t), u(t))$ ,  $x(0) = x_0$  "controlled" by parameters  $u(t)$  (the "controls"). Indeed, if we introduce the set-valued map  $F(t, x) = f(t, x, u) \in U$  then solutions to the differential equations (\*) are solutions to the "differential inclusion" (\*\*)  $x'(t) \in F(t, x(t))$ ,  $x(0) = x_0$  in which the controls do not appear explicitly. Systems Theory provides dynamical systems of the form  $\dot{x}(t) = A(x(t))$

$\dot{x}(t) = -V'(x(t))$ ;  $x(0) = x_0$  in which the velocity of the state of the system depends not only upon the  $x(t)$  of the system at time  $t$ , but also on variations of observations state  $B(x(t))$  of the state. This is a particular case of an implicit differential equation  $f(t, x(t), x'(t)) = 0$  which can be regarded as a differential inclusion (\*\*), where the right-hand side  $F$  is defined by  $F(t, x) = \{v \mid f(t, x, v) = 0\}$ . During the 60's and 70's, a special class of differential inclusions was thoroughly investigated: those of the form  $X'(t) \in -A(x(t))$ ,  $x(0) = x_0$  where  $A$  is a "maximal monotone" map. This class of inclusions contains the class of "gradient inclusions" which generalize the

usual gradient equations  $x'(t) = -V'(x(t))$ ,  $x(0) = x_0$  when  $V$  is a differentiable "potential". 2

The language of ends and (co)ends provides a natural and general way of expressing many phenomena in category theory, in the abstract and in applications. Yet although category-theoretic methods are now widely used by mathematicians, since (co)ends lie just beyond a first course in category theory, they are typically only used by category theorists, for whom they are something of a secret weapon. This book is the first systematic treatment of the theory of (co)ends. Aimed at a wide audience, it presents the (co)end calculus as a powerful tool to clarify and simplify definitions and results in category theory and export them for use in diverse

areas of mathematics and computer science. It is organised as an easy-to-cite reference manual, and will be of interest to category theorists and users of category theory alike.

## REVIEW OF TI NDK USER GUIDE

- This book is an easy to read contemporary romance that I found to be fast-paced. I especially enjoyed the great dialogue between the characters. The combination of the element of mystery going on in the plot along with the sexy by-play between the 2 main characters was fun and interesting. Susan Anderson is one of my favorite authors.
- If you enjoy politics,

American history, and movies, check out this read. What makes America great? Chris Matthews tells us. From the infinitely sagacious leadership of George Washington to the tantalizing, yet almost palpable, American dream symbolized by Jay Gatsby to the idealistic moral indignation of Jefferson Smith, Matthews smoothly runs the gamut of the great American landscape. Matthews exalts such seemingly common men as Andrew Jackson, Abraham Lincoln, and Harry Truman who exhibited, in what was no accident, truly uncommon leadership. Lincoln was said to have rebuked those who complained of Grant's heavy alcohol consumption.

Find out what he drinks and give it to the other generals, the president told them. "I can't spare this man. He fights." Truman, sworn in to office as Vice President just 3 months prior to assuming the Presidency, was, as Matthews states, "a regular fellow who just as easily could be standing behind the counter when you went to buy a new pair of socks," became an extraordinary leader in a time of extraordinary crisis. Truman, along with Lincoln, had the guts to do what he thought was right. In using the atom bomb to end WWII Truman, in effect, avoided a million American casualties in an ensuing invasion. The result was a dismal 23% approval rating when he left office. As Matthews so aptly states, "Tough decisions don't always make friends." History, however, would be a better judge; Truman now is rightfully revered as one of the greatest Presidents of the 20th century. Matthews, being intellectually honest, honors the maverick leadership of John McCain and the eternal optimism of Ronald Reagan as well. Overall, a fun and stimulating read that I recommend you check out.
