The fourth edition of this popular book by Jessica Utts develops statistical

literacy and critical thinking through real-world applications, with an emphasis on ideas, not calculations. This text focuses on the key concepts that educated citizens need to know about statistics. These ideas are introduced in interesting applied and real contexts, without using an abundance of technicalities and calculations that only serve to confuse students. NEW for Fall 2020 - Turn your students into statistical thinkers with the Statistical Analysis and Learning Tool (SALT). SALT is an easy-to-use data analysis tool created with the intro-level student in mind. It contains dynamic graphics and allows students to manipulate data sets in order to visualize statistics and gain a deeper conceptual understanding about the meaning behind data. SALT is built by Cengage, comes integrated in Cengage WebAssign Statistics courses and available to use standalone. Bullshit isn't what it used to be. Now, two science professors give us the tools to dismantle misinformation and think clearly in a world of fake news and bad data. "A modern classic . . . a straight-talking survival guide to the mean streets of a dying democracy and a global pandemic." —Wired

Misinformation, disinformation, and fake news abound and it's increasingly difficult to know what's true. Our media environment has become hyperpartisan. Science is conducted by press release. Startup culture elevates bullshit to high art. We are fairly well equipped to spot the sort of old-school bullshit that is based in fancy rhetoric and weasel words, but most of us don't feel qualified to challenge the avalanche of new-school bullshit presented in the language of math, science, or statistics. In *Calling Bullshit*, Professors Carl Bergstrom and Jevin West give us a set of powerful tools to cut through the most intimidating data. You don't need a lot of technical expertise to call out problems with data. Are the numbers or results too good or too dramatic to be true? Is the claim comparing like with like? Is it confirming your personal bias? Drawing on a deep well of expertise in statistics and computational biology, Bergstrom and West exuberantly unpack examples of selection bias and muddled data visualization, distinguish between correlation and causation, and examine the susceptibility of science to modern bullshit. We have always needed people who call bullshit when necessary, whether within a circle of friends, a community of scholars, or the citizenry of a nation. Now that bullshit has

evolved, we need to relearn the art of skepticism.

The *Media-Savvy Middle School Classroom* is a practical guide for teachers of Grades 5-8 who want to help their students achieve mastery of media literacy skills. Today's fake news, alternative facts, and digital manipulations are compromising the critical thinking and well-being of middle grade learners already going through significant personal changes. This actionable book prepares teachers to help their students become informed consumers of online resources. Spanning correct source use, personal versus expert opinions, deliberate disinformation, social media, and more, these ready-to-use activities can be integrated directly into existing language arts and mathematics lesson plans.

The fourth edition of *Statistical Concepts for the Behavioral Sciences* emphasizes contemporary research problems to better illustrate the relevance of statistical analysis in scientific research. All statistical methods are introduced in the context of a realistic problem, many of which are from contemporary published research. These studies are fully referenced so students can easily access the original research. The uses of statistics are then developed and presented in a conceptually logical progression for increased comprehension by using the accompanying workbook and the problem sets. Several forms of practice problems are available to students and presented in a manner that assists students in mastering component pieces before integrating them together to tackle more complicated, real-world problems.

This volume gathers together leading philosophers of science and cognitive scientists from around the world to provide one of the first book-length studies of this important and emerging field. Specific topics considered include learning and the nature of scientific knowledge, the cognitive consequences of exposure to explanations, climate change, and mechanistic reasoning and abstraction. Chapters explore how

experimental methods can be applied to questions about the nature of science and show how to fruitfully theorize about the nature and role of science with well-grounded empirical research. *Advances in Experimental Philosophy of Science* presents a new direction in the philosophical exploration of science and paves a path for those who might seek to pursue research in experimental philosophy of science.

Now your students can become intelligent consumers of scientific research, without being overwhelmed by the statistics! Jaccard and Becker's text teaches students the basic skills for analyzing data and helps them become intelligent consumers of scientific information. Praised for its real-life applications, the text tells students when to use a particular statistic, why they should use it, and how the statistic should be computed and interpreted. Because many students, given a set of data, cannot determine where to begin in answering relevant research questions, the authors explicate the issues involved in selecting a statistical test. Each statistical technique is introduced by giving instances where the test is most typically applied followed by an interesting research example (each example is taken from psychology literature). REVIEW OF 31 MISLEADING GRAPHS AND STATISTICS FACULTYU

- If you like wars and suspense, then this book is for you. It's about a girl named Patty that lives in Arkansas. Her mother and her father are very mean and selfish. She is hiding a German Soldier in her hide out, and finds out that he is not mean and is very nice and polite. Patty's house keeper Ruth helps feed Anton, but she gets in trouble and goes to a reform school. I think this book is great to read. It shows that it doesn't mean you're a bad person if you're from a different place. It makes me think about how they lived in the 1940s. I rate this book with five stars because it was a very good book like when Patty meets her house keeper at the reform school. It was one of the best books I've read.

- This book is narrated in a 12 year old girl's perspective. It is a good book and easy reading. The important part of this book is the lesson of even when the world doesn't see it, seeing your own beauty, your own goodness. Twelve year old Patty Bergen is a Jew living in her hometown of Jenkinsville, Arkansas during World War 2 amongst prominently Caucasian people. Patty is a curious girl who looks up vocabulary words. She has the aptitude to advance in the world but she doesn't recognize this in herself. She doesn't recognize anything good about herself. She thinks her nose is too long and her figure is nothing but straight lines and not womanly, all in all ugly. Her mother reinforces this belief in her by constantly

making disapproving remarks about her appearance, and not ever showing her affection. Her mother is a very beautiful lady with black hair and dark eyes. Patty feels she is a shame and a burden to her mother, being born so homely. Her father is a very sad abusive man, she doesn't receive love from him. He beats her regularly, for any little thing that ignites his terrible temper. Ruth, the hired colored servant is her only friend. Patty's hometown becomes the site of a German prisoner camp. Patty meets some of these prisoners when they are brought to her father's store to buy hats to shield them from the sun, because they had been passing out picking cotton. She speaks to one prisoner in particular, 22 year old Anton Reiker who knows perfect English and acts as an interpreter for the other prisoners. She finds he is a good person who isn't in favor of what Hitler is doing but had to comply in order to live. This man escapes from the camp and she shelters him. During the time she shelters him they become good friends. Patty is looking for love, friendship, acceptance, and she finds this in him. Anton appreciates her for being kind to him, he recognizes that she is intelligent and pretty, and feels appreciated finally. I didn't like the way Patty thought in this story. Her thinking was confined to only an insecure twelve year old. This is somewhat a good book for someone who wants to analyze the mind of a child like Patty, for instance if you're interested in becoming a child psychologist. I liked the fact that it encompassed a good message on appreciating yourself even though no one else does.
