REVIEW OF THE PASSIVE VOICE PERFECT ENGLISH GRAMMAR

• Despite some shortcomings, I was thoroughly impressed by this book that I read it two times in a row. I also chose to base a school project on it. I am quite convinced that "Biology as Ideology" might actually have been one of the most important books of the previous century (Yes, I mentioned this in my project). And although it is atypical of me to comment on other people's reviews, some things just warrant correction. Contrary to what one reviewer said, Lewontin never once suggests that "there is no such thing as race" in this book. And although Lewontin has a thing or two to say about reductionism - - he does not completely resent it. He talks about an ideal view "that sees the entire world neither as an indissoluble whole, or as isolated bits and pieces". It's easy to miss this message because Lewontin does tend to have a propensity for veering off-topic once in a while. I also don't think that it's far-fetched at all to call Lewontin a Marxist. Although he only mentions Karl Marx once in this book, most of his views on society strongly cohere with Marx's. In our world today, any product of science is claimed and treated as a universal truth. Lewontin encourages the reader not to be mystified by science (don't just leave it to the experts!) And science has never been as "objective" and "nonpolitical" as it claims because it's a product of society. Scientists will view

nature through lens molded by social experience. I thought it daring (and brave) that Lewontin - a luminary in the study of genetics today - should question Darwin's "natural selection", and see more sense in Lamarck's inheritance of acquired characteristics. This book is good because it makes you observe the other side of things. It makes you think. Perhaps the most excellent point made by Lewontin in his book is that of biological determinism as a way of social legitimization. Biological determinism has been used to explain and justify the inequalities within and between societies and to claim that those inequalities can never be changed. We are being taught that there is genetic differentiation between racial groups in characteristics such as behavior, temperament, and intelligence. We are also being taught that people's genes are connected to things like unemployment, eroticism, dominance, poverty, and homelessness. It really getting ridiculous! There is too much power being blunderingly put on the DNA molecule. I however, disagree with Lewontin that the genome project was a waste of time and billions. It has helped not only consolidate the theory of evolution...but it has also helped in areas like systematics, phylogeny, and taxonomy. Another shortcoming is that

Lewontin's book is more than a decade old - many discoveries and advancements have occurred since then in molecular genetics.

- For an excellent short introduction to the problems of polling, as well as other statistical nightmares, check out "How to Lie With Statistics" by Darrell Huff. This little book, which you can read in an afternoon, was written in the 50's and is *still* the definitive bible on how statistics can be misused. It's fun to read, too, and I laughed out loud a number of times while reading it. A more accurate (but less catchy) title for the book would be "how other people lie with statistics, and how you can recognize it when they try to snow you." Each section describes a way that statistics or graphs are misused, and then gives real-life examples from advertisements or newspaper articles or political speeches of the author's day which illustrate the misuse in action. Sad to say, Huff's examples from the 50's look just like the crap we get shoved at us today. Some things never change. The book only costs about \$5, and from it you'll learn as much as an entire college course. Get a copy, read it, and lend it to friends. If I had to throw away all my books and could only keep a dozen, this would be one of the keepers.
