The Cradle to Cradle ("C2C") concept is a biomimetic approach that models human industry on nature's processes, viewing materials as nutrients circulating in healthy and safe metabolisms. It seeks to create systems that are not only efficient but also essentially waste free. A growing number of building owners and developers are looking to implement it in their buildings, be it to increase the productivity of their workforce, or to provide a differentiator. The C2C concept is reasonably covered in building construction; however, it is a rather uncharted area in building services, making it difficult for MEP engineers to develop C2C-inspired designs. Arup set out to bridge this gap, establishing how C2C-inspired design would look like in the different MEP disciplines, and researching which systems, products and materials are available in the market to meet the corresponding criteria. The result is a comprehensive guideline that enables MEP engineers to develop a C2C-inspired design. It covers design criteria, system selection, system sizing, design for deconstruction, as well as material and product selection for the main MEP disciplines, and sets out a number of criteria by which the aptness of a design for C2C can be measured.

Plant Design and Operations, Second Edition, explores design and operational considerations for oil and gas facilities, covering all stages of the plant cycle, with an emphasis on safety and risk. The oil and gas industry is constantly looking for cost optimization strategies, requiring plant-based personnel to expand their knowledge base outside their discipline or subject. Relevant reference materials are scattered throughout various official standards, while staff lack the immediate hands-on knowledge to safely facilitate the full operational life cycle of the plant. This second edition is a complete source of solutions for major process projects including offshore facilities, chemical plants, oil refineries, and pipelines. This single reference provides insight for safer operations and maintenance best practices. It has been updated with more focus on safety in design and

operations, standards, and compliance, and more detailed information on equipment and system/component design. Explores design and operational considerations for oil and gas facilities, covering all stages of the plant cycle, with an emphasis on safety and risk. Includes updated new chapters covering principles of design, security regulations, and human factors. Includes more relevant equipment information covering storage tanks, valves, and control systems. Remains the only source to provide hands-on solutions for process plants in the refining and chemical industries.

This analysis is directed at the heat & frost insulator who specializes in the installation & maintenance of insulation systems for the conservation of energy and control of the environment in buildings and premises requiring temperature control, heat transfer, sound barriers, fire protection, and asbestos abatement. The analysis identifies tasks and sub-tasks performed by an insulator, arranged in blocks of distinct operations relevant to that occupation. These blocks include workplace safety, basic job skills, industrial application, commercial application, asbestos abatement, spraying insulation materials, and fire stopping & smoke seals. For each task, the document outlines the element of skill and knowledge needed to perform the task adequately, identifies any shifts or changes in technology that affect the task, lists tools and equipment required for the task, and provides an indication of whether the task has been validated by each province and territory. The

appendix includes a list of tools and equipment used in the occupation, and a tabulation of the percentage of time a worker spends performing each block and task in a given year (by province/territory and for Canada as a whole).

REVIEW OF INDUSTRIAL PIPE INSULATION METAL LAYOUT HANDBOOK

- This book was just horrid. I will admit that it was well written, but it is not meant for high school students to read. I am a Junior and I was required to read it for my Honors English class and it was just too crude. It talks a lot about sex and is just too harsh for young ears or for any ears really. It seems as if all our culture revolves around anymore is sex and having a Junior English class read it just validates that statement further. If you want to crowd your mind with pornography related scenes and just plain filth then read it, but I advise you not to and to not recommend it to anyone else.

- I almost was almost deterred from reading this book after reading one of the reviews claiming Elana to be immoral and needing sense whacked into her. But since I already had the audiobook on my Ipod I decided to listen to it anyways. Though out the book I kept guarding myself from the moment when Elana would betray her fiancé. To me that never happened. The "ridiculousness" another reader is frustrated by is Elana's willingness to share honestly (in her narrative to her cousin) her thoughts, insecurities, and frustrations -- while the other characters' emotional weaknesses are more hidden from our view. All humans have emotional weaknesses, and the author showed us Alana's so we could see her as human -- rather than as the "supernatural enchantress" the native Adrecians believed her to be. She does not have condescending pity for her fiancé. The story and her father give her very little contact with her fiancé. She does come to develop a deep friendship/love for a native Adrecian man that she is required to spend a lot of time alone with teaching. But they never touch until a chaste farewell embrace when she departs. From the story it seems that Elana's engagement to Everek was arranged when she was younger. Elana continues to love her fiancé throughout the story and never once lets herself or the Adrecian Georyn think they would be physically intimate, have continued correspondence, or contact of any kind following the completion of the mission. Essentially, her father permits, and in ways fosters, Elana and Georyn's friendship because love is a much more powerful emotional stimulus than fear. What I most enjoyed about the book is how it makes you wonder where we Earthlings are in our cultural development and what our potential as a society and as individuals may be. It was fun to think about the fairytales we grow up with and imagining about how they could have been based on interstellar contact. But most of all it was fascinating to ponder the religious symbols that my personal faith clings to and wonder how very little I must know compared to greater intelligences I believe do oversee us and who have and still are working to help us become like them.
