clinical scientist training programme: WHO guideline on mass drug administration of azithromycin to children under five years of age to promote child survival World Health Organization, 2020-09-30 The purpose of the guideline was to provide an evidence-informed recommendation on whether mass drug administration of azithromycin, as a public health intervention for the reduction of under-five mortality, should (a) be rolled out universally in low- and middle-income countries, (b) be applied only in some situational contexts in low-and middle-income countries or (c) not be used at all.

clinical scientist training programme: An Introduction to Biomedical Science in Professional and Clinical Practice Sarah J. Pitt, Jim Cunningham, 2013-04-03 Biomedical Science in Professional and Clinical Practice is essential reading for all trainee biomedical scientists looking for an introduction to the biomedical science profession whether they are undergraduates following an accredited biomedical sciences BSc, graduate trainees or experienced staff with overseas qualifications. This book guides trainees through the subjects, which they need to understand to meet the standards required by the Health Professions Council for state registration. These include professional topics, laws and guidelines governing clinical pathology, basic laboratory techniques and an overview of each pathology discipline. It helps trainees at any stage of training and in any pathology discipline(s) to think creatively about how to gather evidence of their understanding and professional competence. By referring to specialist sources of information in each area, it helps students to explore particular topics in more depth and to keep up to date with professional and legal changes. It is also of value to any Training Officers who are looking for ideas while planning a programme of training for a trainee biomedical scientist. The book includes basic principles of working in the pathology laboratory including laws and regulations, which must be observed, such as health and safety, data protection and equal opportunities laws and guidelines. Practical exercises are included throughout the book with examples of coursework, suggestions for further exercises and self-assessment. Summary boxes of key facts are clearly set out in each chapter and ideas for group/tutorial discussions are also provided to enhance student understanding.

clinical scientist training programme: Clinical and Translational Science David Robertson, Gordon H. Williams, 2009-03-02 Clinical or translational science is the field of study devoted to investigating human health and disease, interventions and outcomes for the purposes of developing new treatment approaches, devices, and modalities to improve health. New molecular tools and diagnostic technologies based on clinical and translational research have lead to a better understanding of human disease and the application of new therapeutics for enhanced health. Clinical and Translational Science is designed as the most authoritative and modern resource for the broad range of investigators in various medical specialties taking on the challenge of clinical research. Prepared with an international perspective, this resource begins with experimental design and investigative tools to set the scene for readers. It then moves on to human genetics and pharmacology with a focus on statistics, epidemiology, genomic information, drug discovery and development, and clinical trials. Finally, it turns to legal, social, and ethical issues of clinical research concluding with a discussion of future prospects to provide readers with a comprehensive view of the this developing area of science. - Clinical research is one of the fastest growing fields in private practice and academic medicine with practical biological, physiological, cellular, and therapeutic applications - Contributions from international leaders provide insight into background and future understanding for clinical and translational science - Provides the structure for complete instruction and guidance on the subject from fundamental principles, approaches and infrastructure to human genetics, human pharmacology, research in special populations, the societal context of human research, and the future of human research

clinical scientist training programme: Bridging Disciplines in the Brain, Behavioral, and Clinical Sciences Institute of Medicine, Division of Neuroscience and Behavioral Health, Committee on Building Bridges in the Brain, Behavioral, and Clinical Sciences, 2000-08-24 Interdisciplinary research is a cooperative effort by a team of investigators, each an expert in the use of different methods and concepts, who have joined in an organized program to attack a challenging problem. Each investigator is responsible for the research in their area of discipline that applies to the problem, but together the investigators are responsible for the final product. The need for interdisciplinary training activities has been detailed over the last 25 years in both public and private reports. The history of science and technology has even shown the important advances that arose from interdisciplinary research, including plate tectonics which brought together geologists, oceanographers, paleomagnetists, seismologists, and geophysicists to advance the ability to forecast earthquakes and volcanic eruptions. In recognition of this, the need to train scientists who can address the highly complex problems that challenge us today and fully use new knowledge and technology, and the fact that cooperative efforts have proved difficult, the National Institute of Mental Health (NIMH), the National Institutes of Health (NIH) Office of Behavioral and Social Sciences Research (OBSSR), the National Institute on Nursing Research (NINR), and the National Institute on Aging (NIA) requested that an Institute of Medicine (IOM) Committee be created to complete several tasks including: examining the needs and strategies for interdisciplinary training in the brain, behavioral, social, and clinical sciences, defining necessary components of true interdisciplinary training in these areas, and reviewing current educational and training programs to identify elements of model programs that best facilitate interdisciplinary training. Bridging Disciplines in the Brain, Behavioral, and Clinical Sciences provides the conclusions and recommendations of this committee. Due to evaluations of the success of interdisciplinary training programs are scarce, the committee could not specify the necessary components or identify the elements that best facilitate interdisciplinary training. However, after reviewing existing programs and consulting with experts, the committee identified approaches likely to be successful in providing direction for interdisciplinary endeavors at various career stages. This report also includes interviews, training programs, and workshop agendas used.

clinical scientist training programme: *The Future of the MBA* Mihnea C. Moldoveanu, Roger L. Martin, 2008-04-25 The MBA is probably the hottest ticket among the current university graduate degree offerings--every year, more than 120,000 students enroll in MBA programs in the United States, and the estimates in Europe do not lag far behind. In addition, job prospects have never looked better for business school graduates; corporations are hiring more business school graduates every year, and compensating them more handsomely. The Future of the MBA provides a sorely needed detailed and systematic review of the major contemporary debates on management education. At the same time, it makes a striking new proposal that will certainly have an impact in business schools: that managers need to develop a series of qualitative tacit skills which could be appropriately developed by integrative curricula brought from different disciplines, including sociology, philosophy, and other social sciences. Moldoveanu and Martin, both involved in the greatly respected integrative business education program at the Rothman School of Management, provide a guide on how to design a reliable integrated program for management students. One of the main assets of the book is that it relies not just on speculative thinking, but on real life experience, and that it also includes case studies that will appeal to practicing managers. As an authoritative reference on MBA education, it will appeal to faculty and staff of business schools, as well as students in related fields like education and public policy.
