**coastal property management ocean city md:** Cultural Dynamics of Climate Change and the Environment in Northern America , 2015-07-28 Global warming interacts in multiple ways with ecological and social systems in Northern America. While the US and Canada belong to the world's largest per capita emitters of greenhouse gases, the Arctic north of the continent as well as the Deep South are already affected by a changing climate. In Cultural Dynamics of Climate Change and the Environment in Northern America academics from various fields such as anthropology, art history, educational studies, cultural studies, environmental science, history, political science, and sociology explore society-nature interactions in – culturally as well as ecologically – one of the most diverse regions of the world. Contributors include: Omer Aijazi, Roland Benedikter, Maxwell T. Boykoff, Eugene Cordero, Martin David, Demetrius Eudell, Michael K. Goodman, Frederic Hanusch, Naotaka Hayashi, Jürgen Heinrichs, Grit Martinez, Antonia Mehnert, Angela G. Mertig, Michael J. Paolisso, Eleonora Rohland, Karin Schürmann, Bernd Sommer, Kenneth M. **coastal property management ocean city md:** Shoreline Protection and Beach Erosion

Control Study Theodore M. Hillyer, 1996 This report presents the findings of a task force review of the U.S. Army Corps of Engineers Shoreline Protection and Beach Erosion Control Program. The assessment of the program was in response to Fiscal Year 1994 Passback Language from the Office of Management and Budget. The report responds to concerns about the shoreline protection program, particularly concerning costs, benefits, environmental effects and the related influences on shoreline development. The study was performed in two phases. The initial phase was completed in January 1994 and published as IWR Report 94-PS-1, Shoreline Protection and Beach Erosion Control Study. Phase I: Cost Comparison of Shoreline Protection Projects of the U.S. Army Corps of Engineers. The purpose of the first phase report was to provide early input to the Office of the Management and Budget regarding the scope and cost of Federal Civil Works shore protection. This second and final phase of the study incorporates: additional analysis of project costs and sand emplacements; and overview of risk management in the coastal zone; a comparison of actual versus anticipated benefits; a discussion on environmental considerations; and an analysis of any induced development effects associated with the Federal shore protection and beach erosion control program. Also, included is a summary of study findings and conclusions. The basis of this report and the data compiled by the task force reflects conditions as of 1 July 1993.

**coastal property management ocean city md: Planning for Coastal Resilience** Timothy Beatley, 2012-06-22 Climate change is predicted to increase the frequency and magnitude of coastal storms around the globe, and the anticipated rise of sea levels will have enormous impact on fragile and vulnerable coastal regions. In the U.S., more than 50% of the population inhabits coastal areas. In *Planning for Coastal Resilience*, Tim Beatley argues that, in the face of such threats, all future coastal planning and management must reflect a commitment to the concept of resilience. In this timely book, he writes that coastal resilience must become the primary design and planning principle to guide all future development and all future infrastructure decisions. Resilience, Beatley explains, is a profoundly new way of viewing coastal infrastructure—an approach that values smaller, decentralized kinds of energy, water, and transport more suited to the serious physical conditions coastal communities will likely face. Implicit in the notion is an emphasis on taking steps to build adaptive capacity, to be ready ahead of a crisis or disaster. It is anticipatory, conscious, and intentional in its outlook. After defining and explaining coastal resilience, Beatley focuses on what it means in practice. Resilience goes beyond reactive steps to prevent or handle a disaster. It takes a holistic approach to what makes a community resilient, including such factors as social capital and sense of place. Beatley provides case studies of five U.S. coastal communities, and “resilience profiles” of six North American communities, to suggest best practices and to propose guidelines for increasing resilience in threatened communities.

**coastal property management ocean city md: Living by the Rules of the Sea** David M. Bush, Orrin H. Pilkey, William J. Neal, 1996 *Living by the Rules of the Sea* is a primer for people living along the nation's coastlines, those considering moving to the coast, or those who want a greater understanding of the risks and dangers posed by living at the seacoast. Published as part of Duke University Press's *Living with the Shore* series, but without a direct focus on the coastline of one particular state, this book is intended as an overall guide to coastal physical processes, risk assessment of potential property damage from coastal natural hazards, and property damage mitigation. Over the past twenty years, the authors have mapped and studied most of the barrier islands in the United States and have experienced coastal processes such as storms and shoreline retreat at close range. They represent a coastal geology/oceanographic perspective that is decidedly in favor of preserving the natural protective capabilities of the native coastal environment. While strongly anti-engineering in outlook, *Living by the Rules of the Sea* does provide a review of coastal engineering techniques. It also examines methods of repairing damage to the natural environment that lessen the prospect of further property damage. Finally, it employs a more inclusive coastal zone approach rather than simply concentrating on a more narrowly defined shoreline. Barrier islands are viewed as part of a larger system in which changes in one part of the system—for example, the mining of sand dunes or dredging offshore for beach replenishment sand—can have

profound effects on another part of the system, predictable effects even though they may not be visible for years or decades. A comprehensive handbook with references to recent storms including hurricanes Andrew, Gilbert, Hugo, Emily, and Opal, *Living by the Rules of the Sea* is designed to help people make better and more informed choices about where or if to live at the coast.
