colorado mandated reporter training: Mandated Reporting of Child Abuse and Neglect

Kenneth Lau, LCSW, Kathryn Krase, JD, LCSW, Richard H. Morse, LMSW, 2008-12-02 [A] concise and detailed description of a very complex issue...rich in detail and insight. --Leslie J. Temme, LCSW School of Social Work, Adelphi University [A] 'must have' resource for practicing professionals and an invaluable teaching tool for social work students....This is precisely the book that mandated reporters seek to assist in the reporting process and understanding their legal obligations. --Keva M. Miller, PhD, LCSW School of Social Work, Portland State University In all states, social workers are required to report suspected child abuse and neglect, and face serious penalties if they fail to do so. But not all cases of abuse are obvious. Mandated reporters are thus confronted with a host of both legal and ethical quandaries when filing a report: What are the responsibilities of mandated reporters? What are appropriate grounds for reporting abuse? How and when should a report be made? Does reporting suspected abuse violate client confidentiality? What if my employer encourages me not to report my suspicions? Addressing these questions and more, this book provides clear definitions of different types of child abuse, including physical, sexual, and emotional, and delineates guidelines on how to identify risk factors and signs of child maltreatment. The authors also clarify difficult ethical issues, including client confidentiality and privileged communication, and present numerous case studies and theoretical vignettes culled from their own experiences as social workers. This guide will be the one resource mandated reporters and social work students cannot do without.

colorado mandated reporter training: Confronting Chronic Neglect Institute of Medicine, Board on Children, Youth, and Families, Committee on the Training Needs of Health Professionals to Respond to Family Violence, 2002-04-04 As many as 20 to 25 percent of American adultsâ€”or one in every four peopleâ€”have been victimized by, witnesses of, or perpetrators of family violence in their

lifetimes. Family violence affects more people than cancer, yet it's an issue that receives far less attention. Surprisingly, many assume that health professionals are deliberately turning a blind eye to this traumatic social problem. The fact is, very little is being done to educate health professionals about family violence. Health professionals are often the first to encounter victims of abuse and neglect, and therefore they play a critical role in ensuring that victims—as well as perpetrators—get the help they need. Yet, despite their critical role, studies continue to describe a lack of education for health professionals about how to identify and treat family violence. And those that have been trained often say that, despite their education, they feel ill-equipped or lack support from by their employers to deal with a family violence victim, sometimes resulting in a failure to screen for abuse during a clinical encounter. Equally problematic, the few curricula in existence often lack systematic and rigorous evaluation. This makes it difficult to say whether or not the existing curricula even works. Confronting Chronic Neglect offers recommendations, such as creating education and research centers, that would help raise awareness of the problem on all levels. In addition, it recommends ways to involve health care professionals in taking some responsibility for responding to this difficult and devastating issue. Perhaps even more importantly, Confronting Chronic Neglect encourages society as a whole to share responsibility. Health professionals alone cannot solve this complex problem. Responding to victims of family violence and ultimately preventing its occurrence is a societal responsibility

colorado mandated reporter training: *Forging a Poison Prevention and Control System* Institute of Medicine, Board on Health Promotion and Disease Prevention, Committee on Poison Prevention and Control, 2004-09-16 Poisoning is a far more serious health problem in the U.S. than has generally been recognized. It is estimated that more than 4 million poisoning episodes occur annually, with approximately 300,000 cases leading to hospitalization. The field of poison prevention provides some of the most celebrated examples of successful public health interventions, yet surprisingly the current poison control system is little more than a loose network of poison control centers, poorly integrated into the larger spheres of public health. To increase their effectiveness, efforts to reduce poisoning need to be linked to a national agenda for public health promotion and injury prevention. Forging a Poison Prevention and Control System recommends a future poison control system with a strong public health infrastructure, a national system of regional poison control centers, federal funding to support core poison control activities, and a national poison information system to track major poisoning epidemics and possible acts of bioterrorism. This framework provides a complete system that could offer the best poison prevention and patient care services to meet the needs of the nation in the 21st century.

colorado mandated reporter training: *Child Protective Services* Diane DePanfilis, 2003 From the Preface: This manual, Child Protective Services: A Guide for Caseworkers, examines the roles and responsibilities of child protective services (CPS) workers, who are at the forefront of every community's child protection efforts. The manual describes the basic stages of the CPS process and the steps necessary to accomplish each stage: intake, initial assessment or investigation, family assessment, case planning, service provision, evaluation of family progress, and case closure. Best

practices and critical issues in casework practice are underscored throughout. The primary audience for this manual includes CPS caseworkers, supervisors, and administrators. State and local CPS agency trainers may use the manual for preservice or inservice training of CPS caseworkers, while schools of social work may add it to class reading lists to orient students to the field of child protection. In addition, other professionals and concerned community members may consult the manual for a greater understanding of the child protection process. This manual builds on the information presented in *A Coordinated Response to Child Abuse and Neglect: The Foundation for Practice*. Readers are encouraged to begin with that manual as it addresses important information on which CPS practice is based—including definitions of child maltreatment, risk factors, consequences, and the Federal and State basis for intervention. Some manuals in the series also may be of interest in understanding the roles of other professional groups in responding to child abuse and neglect, including: Substance abuse treatment providers; Domestic violence victim advocates; Educators; Law enforcement personnel. Other manuals address special issues, such as building partnerships and working with the courts on CPS cases.

colorado mandated reporter training: To Err Is Human Institute of Medicine, Committee on Quality of Health Care in America, 2000-03-01 Experts estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That's more than die from motor vehicle accidents, breast cancer, or AIDS—three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public problems. *To Err Is Human* breaks the silence that has surrounded medical errors and their consequence—but not by pointing fingers at caring health care professionals who make honest mistakes. After all, to err is human. Instead, this book sets forth a national agenda—with state and local implications—for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it, given many patients' expectations that the medical profession always performs perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns discourage reporting of errors—which begs

the question, How can we learn from our mistakes? Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. *To Err Is Human* asserts that the problem is not bad people in health care—it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vitally important to federal, state, and local health policy makers and regulators, health professional licensing officials, hospital administrators, medical educators and students, health caregivers, health journalists, patient advocates—as well as patients themselves. First in a series of publications from the Quality of Health Care in America, a project initiated by the Institute of Medicine
